NEW SERIES

In this issue of the bulletin of Inventories, Shipments and Orders in Manufacturing Industries a table is included, table 2(B), showing the seasonally adjusted values of shipments, orders and inventory at plant in all manufacturing industries for the years 1957 to 1960 and for 1961 to date. A table covering the back years, 1952 to 1956, is included on page 60. Consideration will be given to publishing seasonally adjusted series for the separate groups of industries published in the bulletin when the revisions are completed to bring the current series into the revised standard industrial classification. Two additional series, shipments and new orders in the capital goods industries, not including heavy transportation equipment, and in the construction goods industries are being adjusted for seasonal variation and will be published in the Canadian Statistical Review.

The seasonally adjusted series in table 2(B) are derived from the series published in table 2(A) by removing from each series the month to month variations in the values which result from seasonal changes. In a country like Canada situated in the Northern latitudes with a continental climate over much of its area the month to month variation in weather results in considerable variation both in industrial activity and in the demand for end products.

In considering economic times series this seasonal variation is one of four generally accepted types of variation or movement. The first is called the trend or secular movement of the series and is characterized by a smooth regular movement covering many years related to such basic factors as the size and structure of the economy. The second, called the cyclical movement, consists of successive roughly similar phases of expansion and contraction with the complete cycle covering a period of more than one year. The third is the seasonal variation which covers the month to month changes during the year which are repeated from year to year. The fourth movement covers the irregular movements which may or may not be identified in terms of cause.

The series are adjusted on the electronic computer using the United States Bureau of the Census Method II. It is based on the traditional ratio to moving average method but is developed further. Because of the speed with which the calculations are performed it is possible at one stage to make a better estimate of the trend cycle by fitting a fifteen term moving average to the data. Increased speed has the further advantage of making possible the mass adjustment of data, thus extending the seasonal adjustment process to series which would otherwise be prohibitive.

The main steps of Census Method II are given briefly below:-

ROUND I -

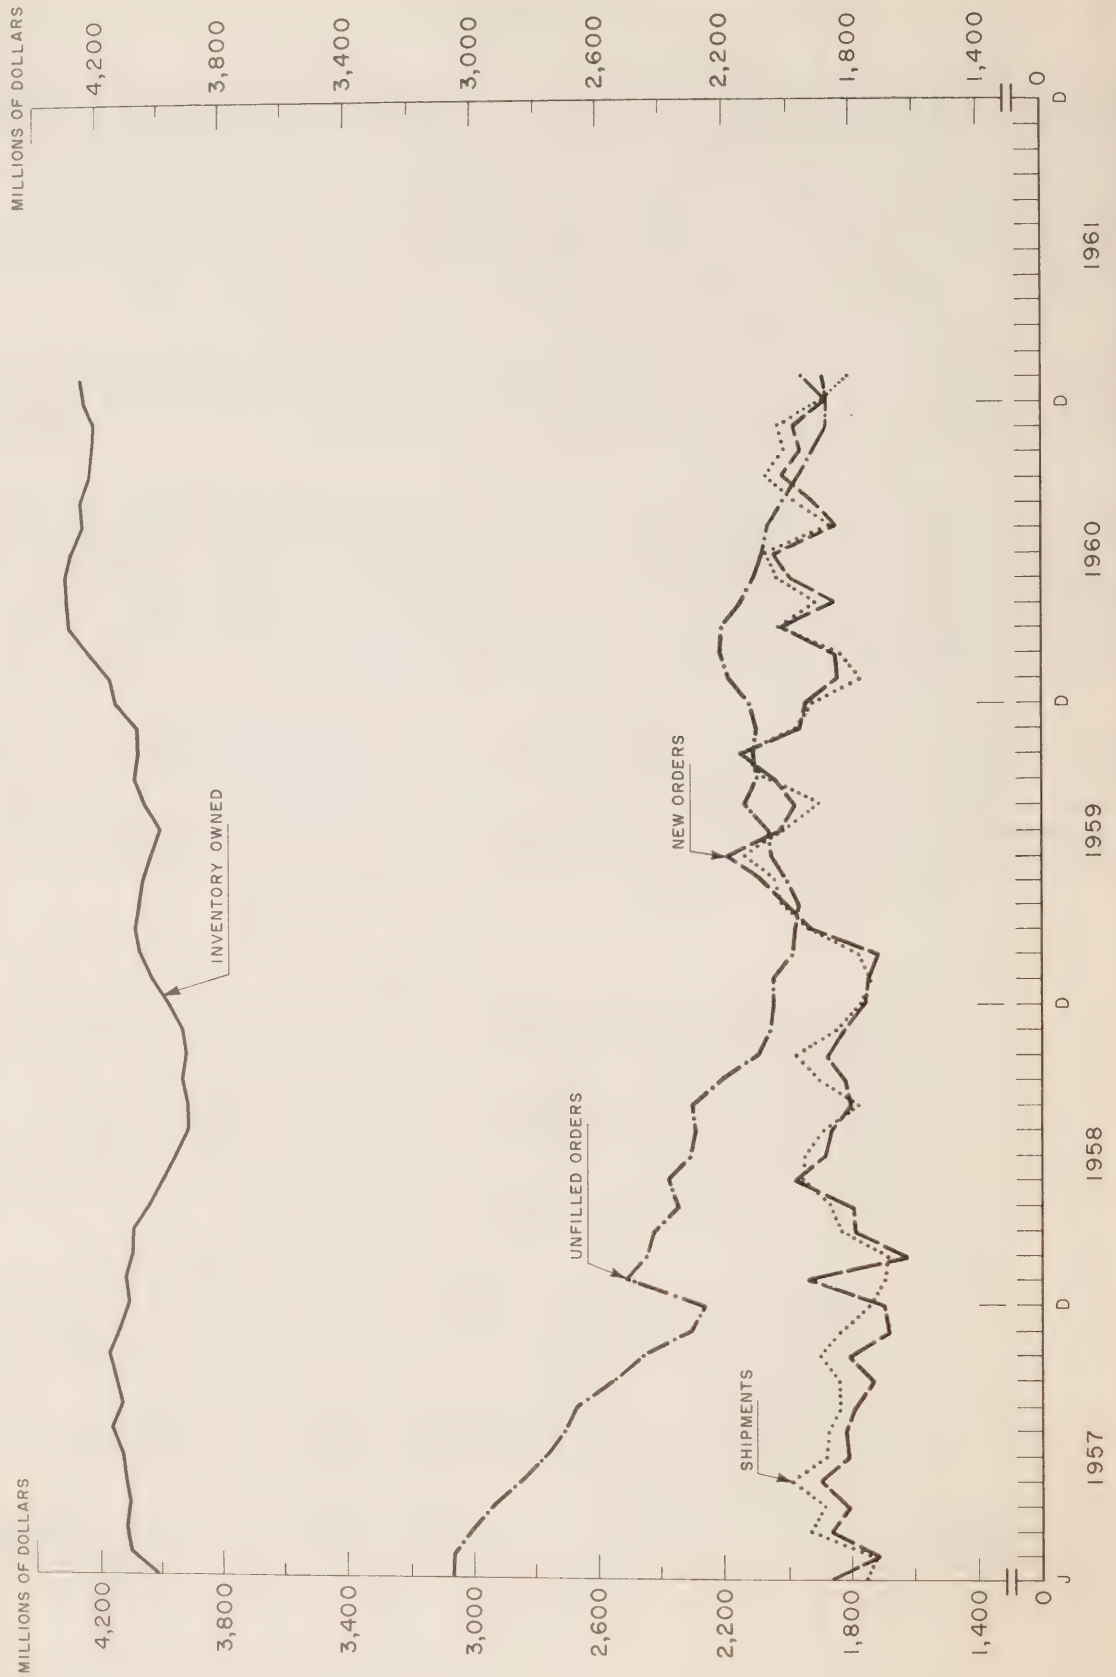

- 1) A 12-month centered moving average of the original series is computed.
- 2) Ratios of original observations to the centred 12-month moving average are computed.
- 3) Ratios more than two standard deviations from their moving average are eliminated and replaced by more representative values.
- 4) Moving averages are run through these ratios to obtain the preliminary seasonal factors.
- 5) The preliminary seasonal factors are divided into the original observations to obtain the preliminary seasonally adjusted series.

ROUND II -

- 6) A weighted fifteen term moving average is run through the preliminary seasonally adjusted series. It gives a better estimate of the trend cycle than the centered twelve term moving average in Round I.
- 7) The ratios of original observations to the fifteen-month moving average are computed.
- 8) Extreme ratios are eliminated by methods similar to Round I.
- 9) Moving averages are run through these ratios to obtain the final seasonal factors.
- 10) The final seasonal factors are divided into the original data to give the final seasonally adjusted series.

Many other tables are printed out in the complete program. They provide information on the signs of the various components and various checks and tests on the basic computations.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

SHIPMENTS: - The value of manufacturers' shipments for January, estimated at \$1,808 million, was down three percent from the revised December value of \$1,877 million but up two per cent from the January 1960 value of \$1,769 million. Revised cumulative shipments for 1960 at \$23,444 million were up slightly from the 1959 value of \$23,353 million.

Most of the industry groups of the Standard Industrial Classification shared in the shipments decline in January of \$69 million. Transportation equipment industries were lower in January by \$26 million (or 13.7 percent), foods and beverages were lower by \$25 million (or 6.4 percent) and nine of the remaining S.I.C. groups were lower by a total of \$42 million. Increases in shipments in January of \$24 million were shared by five industry groups of which groups chemical products showed \$12 million (or 12.4 percent increase). Of the industry groups classified according to the economic use classification all groups except two declined in January. The exceptions were semi-durable consumers' goods and industries producing intermediate goods and supplies. However, nearly all these changes conformed to the changes experienced in most previous years.

Reference to the deseasonalized data for December 1960 and January 1961 will show that shipments increased rather than decreased as shown by the raw data and as described above. The obvious interpretation is that the decline shown by the raw data is less than could be anticipated from seasonal influences alone and after making due allowance for seasonal influences, January sales indicate a higher level of activity than that indicated by December's seasonally adjusted sales.

INVENTORY: - The preliminary estimate of total inventory owned by manufacturers' at the end of January of \$4,247 million was up 0.1 percent from the revised December value of \$4,241 million and up 2.1 percent from the January 1960 value of \$4,160 million.

Total inventory held at the end of January was estimated at a preliminary \$4,482 million and was up 0.1 percent from \$4,476 million at the end of December but virtually unchanged from January 1960. Inventory held under long-term contracts (progress payments) at \$235 million in January was down 0.4 percent from the revised December value of \$236 million and down 27.2 percent from January 1960.

Inventory components showed the following shifts in January from December: raw materials down 0.3 percent, goods in process down 0.6 percent, finished products up 1.3 percent and goods in process minus progress payments down 0.7 percent. Finished products inventory usually increases in the first months (and in the final months) of the year and the increase from December to January this year of 1.3 percent is less than the usual increase of about three percent. A major part of the increase this year can be seen in the industries producing largely for export and the motor vehicles and related industries group. Shifts in goods in process inventory and raw materials inventory tend to be more erratic and it is difficult to provide a rationale for any particular movement. However, goods in process changes tied in with other series will yield more readily to analysis.

Inventories owned by manufacturers, as shown by the raw data, moved somewhat more erratically in 1960 than in most other recent years. Usually, one trend dominates throughout the year whether of accumulation or liquidation although the trend may be reversed during the year. In 1960, heavy accumulation in the first quarter eased considerably in the second and gave way to moderate liquidation in the third. In the final quarter, accumulation once more started and continued into January 1961. Inventories owned stood higher at the end of 1960 by \$101 million (or \$111 million in the deseasonalized data) from the end of 1959. Much of this increase occurred in non-ferrous metal products with lesser increases in wood products, paper products, tobacco and tobacco products and chemical products. A notable decline occurred in iron and steel products. The increases in tobacco and tobacco products, and in paper products were almost entirely in raw materials. In wood products and chemical products most of the increases were in finished products. Non ferrous metal products showed equal increases in both raw materials and finished products. Generally, goods in process inventory declined in total over the year. Further, altho' the month to month fluctuations in goods in process in 1959 showed considerable similarity to those of 1960, the decline in total in 1960 was more extensive than in 1959.

Changes in inventory owned from December 1960 to January were minor in percentage terms in most of the industry groups of the Standard Industrial Classification. The exceptions were: tobacco and tobacco products of plus 12 percent and wood products of plus 3 percent. Among the industry groups of the economic use classification the larger changes were: heavy transportation equipment industries of minus 5 percent, and motor vehicles and related industries of plus 3 percent. It is worth noting that the divergent movements of the latter two groups largely cancelled each other so that the transportation equipment group of the S.I.C. showed no change. These two groups however are not identical to the S.I.C. group.

The ratio, inventory owned to shipments, was in January 2.35, in December 2.26 and in January 1960 also 2.35. The ratio, finished products to shipments, was in January 0.78, in December 0.74, and in January 1960 0.76.

ORDERS: - The preliminary value of new orders received in January of \$1,890 million was up 1 percent from December and up 3 percent from January 1960. The value of unfilled orders at the end of January of \$1,957 million was up 4 percent from December but down 11 percent from January 1960.

The largest percentage declines from January 1960 in unfilled orders among the industry groups of the economic use classification were: motor vehicles and related industries of 26 percent, heavy transportation equipment industries of 15 percent, construction goods industries of 15 percent and industries producing intermediate goods and supplies of 19 percent. From January 1960 to January 1961 the one large percentage increase (13 percent) was in industries producing largely for export. This industry group showed a 45 percent increase over December and this increase reflects the annual placement of orders in the pulp and paper industry. Further, the level of unfilled orders in this industry is about 40 percent higher this January than last. In the durable consumers' goods industries, an increase in unfilled orders from January 1960 to this January of \$5 million (or 3.3 percent) was largely responsible for the total consumers' group showing a slight (0.1 percent) increase over last year.

Changes in unfilled orders from December were varied. The increase next largest to the export group mentioned above was seven percent and was in the intermediate goods and supplies industries. Other changes were lesser in percentage terms while the total consumers' goods group, and the total capital goods group were both down by 0.2 percent.

TRADING OUTLETS: - Sales through manufacturers' trading outlets in January of \$222 million were 13 percent below the revised December value of \$255 million but 4 percent above January 1960 sales of \$213 million. Inventories held at outlets at the end of January of \$297 million were 1 percent below the revised December value of \$300 million but 1 percent above the January 1960 value of \$294 million.

The largest declines in sales in percentage terms were in foods and beverages (15%), rubber industries (26%), electrical apparatus industries (own 7%, other 25%), and petroleum and coal (16%).

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of Inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned as well.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the December 1960 report, page 81.

CONCEPTS AND SOURCES

For further detail, and for description of methods used, see December, 1960 report, page 81.

CONCEPTS

Shipments - (Tables 1 to 5)- represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 8) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 8, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 7) will be found on page 54 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 7. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 8. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

SHIPMENTS: Manufacturers' shipments in February, estimated at \$1,761 million, were 0.4 percent below January and 4.0 percent below February 1960. Shipments for the two months of this year, however, are 2.1 percent below the two months of last year. These same data, when adjusted for seasonal variation, show a decline from January to February of 2.7 percent.

Generally, shipments changes among the industry groups from January to February conformed quite closely to the experience of most previous years. The total consumers' group of the economic classification showed an overall increase from January to February as it has for each of the last nine years. Perishable consumers' goods showed a fairly usual decrease and reflects, chiefly, declines in a wide range of industries in the food and beverages group (of the S. I. C.). A substantial increase in the semi-durable consumers' group reflects the increases in the clothing industries particularly factory clothing.

INVENTORIES: Inventories owned by manufacturers' at the end of February of \$4,278 million were up from January by 0.7 percent and up from February 1960 by 1.3 percent. Inventory held at the end of February of \$4,508 million was up from January by 0.8 percent but down from February 1960 by 0.9 percent. Inventory held under long-term contracts (progress payments) was largely responsible for the year over year decline in inventory held. At the end of February the value of progress payments at \$229 million was up 2.7 percent from January but down 28.9 percent from February 1960.

Inventory components showed the following changes from January to February: finished products up 1.3 percent, goods in process up 1.7 percent, goods in process minus progress payments up 1.4 percent. Raw materials were virtually unchanged.

The ratio of total inventory owned to shipments was 2.43 for February, 2.40 for January and 2.30 for February 1960. The ratio of finished products to shipments was 0.81 in February, 0.80 in January and 0.75 in February 1960.

Altho' the month to month change in manufacturers' inventories is usually small and altho' movement up or down once initiated tends to continue for some time it is nonetheless extremely difficult to anticipate the future movements of manufacturers' total inventories. The increases in total inventories held in the last three months are illustrative. Inventories during 1960 reached very high levels and the decline which began at the end of the second quarter seemed to be a necessary and expected correction. The level, by most ordinary measures, remained high. Since November however inventories have increased by 1.6% and altho' increases of an apparently seasonal nature are not uncommon, it is unusual for seasonal swings to reverse the underlying trend at the time.

This is not to say that the increases during the last three months are not the result of seasonal factors; it does, however, appear unlikely that they mark the beginning of a trend toward even higher levels of inventory accumulation. First, the absolute level of inventories is still near the highest level yet recorded and even if price adjustments are made, the recent level is still above the earlier highs of 1957. Second, the same data, when adjusted for seasonal variation, show a declining trend perhaps indicating that the current increases in inventory are less than usual for these months. Third, the ratio of total inventory owned to shipments is currently at the highest value for three years; in point of fact the level is the same as the February 1958 value which month started the firm decline in inventories in that year. It is perhaps misleading to depend too much on the values of the monthly ratios for inventory comparisons for they reflect more the variability of monthly shipments than the longer term significance of the level of inventories. The averages (arithmetic) of the monthly ratios for the year are more meaningful and the annual averages for the last few years support the idea that inventories relative to shipments are at the high level which preceded the 1958 liquidation. One final point concerns the significance of finished products inventory. In most of the S.I.C. groups of industries which have large holdings of finished goods, the percentage that the finished goods represent of total inventory has increased significantly in the last few years. This fact is also shown by comparing the two ratios of inventories and shipments for the last several years. While the ratio of total inventory to shipments is high, the ratio of finished products to shipments is at a record level.

ORDERS: New orders received in February of \$1,774 million were down 3.2 percent from January and down 4.1 percent from February 1960. Unfilled orders at the end of February of \$1,951 million were up 0.7 percent from January but down 11.5 percent from February 1960. The larger declines over the year in unfilled orders among industries classified according to the economic use classification were: heavy transportation 20%, construction goods 20%, motor vehicles and related industries 25%, and intermediate goods and supplies 15%. Only two groups showed substantial increases and were: perishable consumers' goods 17% and industries producing largely for export 15%.

TRADING OUTLETS: Sales of goods through manufacturers' trading outlets during February of \$217 million were down 3.0 percent from January and down 2.8 percent from February 1960. Most percentage changes from January to February in both sales and inventory were minor except in iron and steel products which showed a 10% decline in sales. (1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of Inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned as well.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the December 1960 report, page 81.

CONCEPTS AND SOURCES

For further detail, and for description of methods used, see December, 1960 report, page 81.

CONCEPTS

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, part from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 53 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 7. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 8. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

SHIPMENTS: Manufacturers' shipments in March, estimated at a preliminary \$1,886.3 million, were up .3 percent from the revised \$1,758.5 million in February and down 6.9% from \$2,025.6 million in March 1960. Shipments for the first quarter at \$5,411.8 million were 3.9 percent below shipments for the first quarter of 1960 of \$5,629.0 million.

March is one month in which increases in shipments invariably occur but the increase this March is less than usual. The strength of the seasonal and other influences and the degree to which March falls short of the usual increase in shipments can be gauged from the data adjusted for seasonal variation. These data show a 5.6% decline in March to \$1,814.6 million from \$1,922.6 million in February. From the unadjusted data, February-March increases for the four years, 1957-1960, averages little less than ten percent as against the increase this March of 7.3%.

All groups of the economic use grouping of industries shared in the shipments increase as has usually been the case in March for the last nine years. In year over year comparisons with the same economic use grouping, all groups showed declines this March over last March except perishable and semi-durable consumers' goods industries.

Of the industry groups classified according to the Standard Industrial Classification only the non-ferrous metal products, showed a month over month decline. Increases ranged to a maximum percentage of 17.4 for leather products. In value terms, the largest increases were in foods and beverages of \$23.6 million, iron and steel products of \$20.3 million and transportation equipment of \$19.0 million.

INVENTORIES: The preliminary estimate of the value of inventories owned by manufacturers at the end of March of \$4,319.6 million was up 0.5 percent from the revised \$4,297.8 million at the end of February and up 0.8 percent from \$4,284.7 million at the end of March 1960. The preliminary estimate of inventories held by manufacturers at the end of March of \$4,557.6 million was up 0.6 percent from the revised \$4,531.2 million at the end of February but was barely down (0.15 percent) from \$4,564.6 million at the end of March 1960. Inventories held under long-term contracts (progress payments) were estimated at a preliminary value of \$238.0 million at the end of March, up 2.0 percent from the revised February value of \$233.4 million but down 15.0 percent from \$279.9 million in March 1960.

Inventory components from February to March showed the following changes: raw materials down 0.4 percent, goods in process up 1.1 percent, goods in process less the value of progress payments up 0.9 percent, and finished products up 1.6 percent.

The ratio of total inventory owned to shipments was 2.29 in March, 2.44 in February and 2.12 in March 1960. The ratio of finished products to shipments was 0.77 in March, 0.82 in February and 0.71 in March 1960. The declines in the ratios in March reflected only the increase in shipments: inventories were virtually unchanged as far as the ratios are concerned.

Although the month to month changes in manufacturers' inventories is usually small and though movement up or down once initiated tends to continue for some time, it is none-the-less extremely difficult to anticipate the future movements of manufacturers' total inventories. The increases in total inventories in the last four months are illustrative. Inventories during 1960 reached very high levels and the decline which began at the end of the second quarter seemed to be a necessary and expected correction. But the change was short-lived and the level, by most ordinary measures, remained high. Since November, inventories have increased by 2.6 percent and although increases of an apparently seasonal nature are not uncommon, it is unusual for them to reverse the underlying trend.

This is not to identify the increases of the last few months as necessarily a seasonal movement: they may not be. But it does appear unlikely that they mark the beginning of a further upward trend to even higher levels of inventory accumulation. First, the absolute level of inventories is still at the highest levels yet recorded and even if price and other adjustments are made, the present level is still above the earlier highs of 1957. Second, the ratios of inventory to shipments are currently at very high levels despite the easing of these ratios this month. It is perhaps misleading to depend too much on the values of the monthly ratios for inventory comparisons for they reflect more the variability of shipments than the longer term significance of the level of inventories. The averages (arithmetic) of the monthly ratios (or a moving average) are more meaningful, and the annual averages for the last few years support the contention that inventories relative to shipments are at the high level which preceded the 1958 liquidation. Third, in most of the S.I.C. groups that have large holdings of finished goods, the percentage that the finished goods

represent of the total inventory has increased significantly in the last few years. This fact is also shown by comparing the two ratios of inventories and shipments for the last several years. The ratio of finished products to shipments has advanced almost continuously: the ratio of total inventory owned to shipments has shown some decline.

If the prospect of further extensive accumulation is to be heavily discounted (although not ruled out) the alternatives of liquidation or sideways movement have to be considered. From the records of the last ten years, sideways movements seem a rarity and movements have been either up or down in firm though irregular cycles. But again, in terms of the same broad generalizations, the inventory cycle, since the huge upswing concurrent with the investment boom of 1956-7, seems to be more contracted than before. Longer term influences seem to have lessened: seasonal influences seem to have increased. The effect has been to give a more erratic pattern to the cycle with shifts from liquidation to accumulation more frequently made and with the liquidation period somewhat more contracted than the preceeding accumulation period.

During 1960 inventory owned reached a peak in the second quarter of \$4,297.1 million and declined 2.0% to a low of \$4,211.7 million in the fourth quarter. The current value of \$4,319.6 million is \$22.5 million or 0.5% above the 1960 high. Even if inventories reach a higher peak in the second quarter this year, the interval between the two peaks will be the shortest on record.

ORDERS: The preliminary estimate of unfilled orders at the end of March of \$1,986.4 million was up 0.2 percent from the revised \$1,982.0 million at the end of February and down 9.9 percent from \$2,203.6 million last March. The largest percentage declines from last March among the industries of the economic use classification were in heavy transportation (13.3%), construction goods (22.8%), motor vehicles and related industries (17.0%), and intermediate goods and supplies (12.0%).

The preliminary estimate of new orders received in March at \$1,890.7 million was 7.9 percent above the revised February value of \$1,752.6 million and down 6.6 percent from \$2,024.5 million last March.

TRADING OUTLETS: Sales through manufacturers' trading outlets in March of \$237.7 million were 8.3 percent above the February value of \$219.4 million. Sales were up by 15.9 percent in the rubber industries, by 16.2 percent in the chemical industries and were up by lesser percentages in all the remaining groups.

Inventories held at manufacturers' trading outlets at \$277.3 million were down 2.6 percent from \$284.7 million in February. Percentage Changes were small and mixed. The largest was a decline of 9.9 percent in petroleum and coal industries.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the December 1960 report, page 81.

CONCEPTS AND SOURCES

For further detail, and for description of methods used, see December, 1960 report, page 81.

C O N C E P T S

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 53 of the bulletin.

S O U R C E S

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 7. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 8. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

SHIPMENTS: Manufacturers' shipments in April estimated at a preliminary \$1,859.0 million were down 3.6 percent from the revised March value of \$1,928.0 million and down 2.7 percent from \$1,911.2 million last April. Total shipments for the four months of 1961 at \$7,312.6 million were 3.0 percent below \$7,540.1 million for the similar period last year.

A decline in shipments in April seems more the rule than the exception with seven of the last nine years showing a decline. The decline this year does not appear to be as severe as could be expected from seasonal causes as the data adjusted for seasonal variation show an increase in April of about three percent.

Of the groups of industries classified according to the economic use classification only heavy transportation equipment showed an increase and this was reflected in the increase in total capital goods. The other groups showed declines which were small in percentage terms with the exception of semi-durable consumers' goods which showed a decline of thirteen percent. Among the groups classified according to the Standard Industrial Classification only paper products and non-metallic mineral products showed an increase. The increases in shipments in the aircraft, boatbuilding, and shipbuilding industries which were reflected in the increase in the heavy transportation group of the economic use classification were absorbed by the decline in the motor vehicles and related industries so that the transportation group of the S.I.C. groups showed a small net decline.

Shipments for the four months of this year were below those for the similar period last year for most groups. The largest percentage declines for this period were thirteen percent for heavy transportation and sixteen percent for motor vehicles and related industries. The groups showing increases were perishable consumer's goods, semi-durable consumer's goods and the unclassifiable industries but all of these increases were small in percentage terms.

INVENTORIES: The preliminary estimate of the value of inventories owned by manufacturers at the end of April of \$4,275.2 million was down 0.8 percent from \$4,308.4 million at the end of March and down 0.3 percent from \$4,287.9 million at the end of April last year. The preliminary estimate of inventories held at the end of April of \$4,509.4 million was down 0.9 percent from \$4,550.0 million from March and down 1.5 percent from \$4,576.1 million at the end of April last year. Inventories held under progress payments arrangements were down 3.0 percent to \$234.1 million in April from \$241.4 million in March and down 18.8 percent from \$288.2 million last April.

Inventory components from March to April showed the following changes: raw materials down 1.1 percent, goods in process down 0.3 percent, finished goods down 1.0 percent, and goods in process less progress payments up 0.4 percent.

The ratio of total inventory owned to shipments was 2.30 in April, 2.23 in March and 2.24 in April 1960. The ratio of finished products to shipments was 0.78 in April, 0.76 in March and 0.76 in April 1960.

Inventories as well as shipments declined this month and from a superficial view-point this appears to be a anomaly. Further examination of the data shows that raw materials accounted for just over half of the decline. Finished products accounted for most of the remainder with a small decline in goods in process. From the data adjusted for seasonal variation it appears that the declines in the three components are greater than what could be expected from seasonal influences. Among the major groups of the Standard Industrial Classification those groups showing the largest dollar declines in total inventory held were foods and beverages, wood products, and paper products and nearly all of the declines in these groups were in raw materials and finished products. The decline in foods and beverages was chiefly finished products and may be reasonably called an expected seasonal movement both in direction and in strength reflecting as it does a drawing-off of stocks of (mostly canned) fruits and vegetable preparations. The decline in wood products was evenly divided between raw materials and finished products and is also largely explained by seasonal influences. The decline in paper products of fourteen million dollars in total was chiefly (\$9 million) in raw materials with the remainder in finished products and these declines can also be identified as seasonal in character.

While seasonal movements are quite pronounced in some industry groups, the sum of manufacturers' total inventories is the resultant of many divergent movements of industry groups and of the individual industries which comprise the groups and the seasonal influences are thus often difficult to detect in the total. Sometimes the dominance of the seasonal pattern of one industry will influence the S.I.C. group to which it is classified; in other cases a number of industries combined in a roughly synchronous seasonal movement will give the SIC group a characteristic seasonal pattern. Generally, the SIC groups can be divided into those which exhibit a seasonal pattern and those which

show no obvious seasonality but which follow a longer-term cyclical movement. The latter type would include iron and steel products, non-ferrous metal products and perhaps miscellaneous manufacturing. Most but not all of the remaining groups generally increase inventory during the first months of the year with the notable exceptions of foods and beverages and chemical products which usually decline. During the middle and later months of the year most groups show more erratic movements and it is difficult to generalize upon them. An note-worthy comment on the way which the divergent seasonal movements tend to cancel each other is the fact that foods and beverages inventory decreased by \$59 million in the November-to-April period while tobacco and tobacco products inventory increased by the same amount in the same period.

Seasonal influences dominated not only the April decline in inventories but it does appear that seasonal forces were also largely responsible for the rather anomalous accumulation between November and March. In this interval total inventories rose \$102 million in the face of what appeared to be a firm downward trend. The industries largely responsible were those that usually have seasonal accumulation during that period and are as follows: tobacco and tobacco products with an increase of \$60 million, wood products with an increase of \$35 million and paper products with an increase of \$24 million. By contract, the electrical apparatus and supplies group which usually shows marked inventory accumulation (mostly of finished products) during the first half of the year has this year to date shown a moderate liquidation. Also adding to the accumulation was a build-up of \$25 million in transportation industries and of \$15 million in non-ferrous metal products but neither of these movements could be justifiably termed seasonal and, indeed, the movements of inventories in these two industries are not characterized by seasonal influences.

Underlying the short-term oscillations just described are at least two longer-term cyclical movements. The first and by far the larger is an extensive liquidation in the iron and steel group which amounted to \$131 million since the peak in May 1960 and \$34 million in the November-March period. About \$96 million of the \$131 million can be attributed to a decline in the value of progress payments or inventory held but not owned. The data have recently described one complete cycle from a peak in 1957 to a trough about 16 months later to the recent peak in May 1960 or about 20 months after the trough. It is difficult to place any confidence in the cycle holding to a relatively stable pattern (which would indicate a trough about the end of the year) and especially so since the total of inventory held has shown a definite tendency to level off in the first quarter. The second longer term cyclical movement is that of non-ferrous metal products. Since the trough in December 1959, inventories have increased by about \$59 million to a high of \$330 million in April 1961 or about \$21 million greater than the previous high in April 1959. The cyclical movement shows even less regularity than that of the iron and steel group. The only comment that can be made is that the rate of increase in March and April is less than that which prevailed on the average during any of the recent accumulation in 1960-61, in 1959, or in 1957-8. Further the two previous cyclical peaks were in April 1959 and March 1958.

ORDERS: The preliminary estimate of new orders for April at \$1,833.7 million was 6.8% lower than the revised March value of \$1,966.9 million and 1.0% lower than the April 1960 value of \$1,852.0 million. New orders received for the first four months of 1961 at \$7,407.4 million were 2.1% lower than the corresponding value for 1960 of \$7,568.4 million.

The decreases in new orders and shipments left the level of unfilled orders in April down only 1.3% from \$2,020.9 million to \$1,995.6 million. This, however, is 6.9% lower than the April 1960 value of \$2,144.4 million. All groups of the economic-use classification of industries, with the exception of semi-durable consumers' goods (which increased fractionally) showed small decreases. The largest decreases were in perishable consumers' goods (6.1%) and in motor vehicles and related industries (5.8%).

TRADING OUTLETS: Sales through manufacturers' trading outlets in April at \$215.8 million were 9.0% lower than the revised March value of \$237.2 million and fractionally lower than the April 1960 value of \$216.9 million. Decreases were general with the largest changes in percentage terms in petroleum and coal industries (13.2%) and foods and beverages industries (10.5%).

Inventories held at manufacturers' trading outlets at \$282.7 million were 1.7% higher than the revised March value of \$278.0 million and 1.6% lower than the April 1960 value of \$287.3 million. Percentage changes were small. The largest was an increase in rubber industries of 4.1%.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the December 1960 report, page 81.

For further detail, and for description of methods used, see December, 1960 report, page 81.

CONCEPTS

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the exclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to repayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also included except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 53 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. For industries are included in the total shipments estimates by using data available from other Bureau series, and to of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 7. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 8. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

SHIPMENTS: Manufacturers' shipments in May, estimated at a preliminary \$1,988.1 million, were up 6.4 percent from the revised estimate of \$1,868.2 million in April and down 2.1 percent from \$2,030.5 million in May, 1960. Shipments for the five months of 1961 of \$9,309.9 million were down 2.7 percent from the similar period last year of \$9,570.6 million.

Shipments were higher in May as compared with April for all industry groups except for the knitting mills and clothing group of the Standard Industrial Classification and the semi-durable consumers' group of the economic use classification. The declines in these groups resulted mainly from declines in men's and women's factory clothing industries. The largest value increases were in foods and beverages of \$29 million, transportation equipment industries of \$16 million and chemical products of \$15 million. Of these increases, that of foods and beverages is an expected seasonal movement in both direction and strength; that of chemical products can be traced in part only to seasonal influences while that of transportation equipment industries is not readily linked with a regular or near-regular seasonal pattern.

Shipments in the durable goods industries although a little lower to date in total than for the similar period last year, are running somewhat lower than new orders leaving the level of unfilled orders in May over \$40 million higher since the beginning of the year. This slight indication of strengthening demand here is not, however, reflected in the durable consumers' group where shipments have in fact lost the slight edge initially held this year over last.

INVENTORIES: The preliminary estimate of the value of inventories owned by manufacturers at the end of May of \$4,264.4 million was down 0.7 percent from \$4,293.9 million at the end of April and down 0.8 percent from \$4,297.1 million at the end of May last year. The preliminary estimate of the value of inventories held by manufacturers at the end of May of \$4,494.3 million was down 0.8 percent from \$4,530.9 million at the end of April and down 2.1 percent from \$4,590.4 million at the end of May last year. Inventories held under progress payments arrangements were down 3.0 percent to \$230.0 million in May from \$237.0 million in April and down 21.6 percent from \$293.3 million last May.

All inventory components declined this month and the percentage changes were: raw materials 0.9, goods in process 0.8, finished products 0.6 and goods in process less the value of progress payments 0.3.

The ratio of total inventory owned to shipments was 2.14 in May, 2.30 in April and 2.12 in May, 1960. The ratio of finished products to shipments was 0.73 in May, 0.78 in April and 0.71 in May 1960.

Inventories continued to decline this month and this movement down can be more readily anticipated than a continuing accumulation. It appears to be, in some respects, a continuation of the decline that started in mid-1960 before it was interrupted by the unexpected seasonal accumulation later in that year. All components declined this month and this, in itself, is unusual. If the data adjusted for seasonal variation can be considered a more sensitive indicator of movements of the components, it is interesting to note that finished products showed an increase this month rather than a decrease. This may tie in with the trend of the last few years toward finished products representing a higher percentage of total inventory.

From the peak in May 1960, inventory owned moved firmly downward until November 1960 when an unexpected accumulation occurred and continued until the most recent peak in March 1961. Throughout the decline from May to November the usual seasonal increases largely, but not entirely, compensated for the usual seasonal decreases: it appears that the seasonal industries would normally account for a net decrease in inventories during the summer. Against this seasonal pattern the iron and steel group registered a strong decline which drove down the total of inventories considerably. In this period, the net decline of \$85 million was accounted for by six industry groups showing an increase of \$142 million and ten industry groups showing a decrease of \$227 million of which the iron and steel group registered \$68 million.

During the November to March period of accumulation a number of changes occurred. The downward force of liquidation in the iron and steel group eased considerably so that in the five months of 1961 the level in this group has changed little more than one percent. The force behind the liquidation thus disappeared. Of the movements of the remaining groups contributing to the accumulation none can be identified as unusual or unexpected except those of foods and beverages and tobacco and tobacco products, and then only in size rather than direction. The seasonal liquidation of foods and beverages in this period appears less than usual at \$51 million as against \$81 million and \$74 million one and two years earlier. The seasonal accumulation of tobacco and tobacco products

is greater than usual reflecting the outstanding 1960 crop. The non-typical aspects of the seasonal movements in these two industries in particular certainly account for some of the anomalous accumulation in this period.

ORDERS: The preliminary estimate of new orders received in May of \$1,981.2 million was 5.8% above the revised April estimate of \$1,873.3 million and fractionally (0.5%) below the estimate of \$1,990.7 million last May. New orders received for the first five months of 1961 of \$9,428.3 million were 1.4% below the new orders received in the similar period last year of \$9,559.1 million.

The level of unfilled orders at the end of May of \$2,019.1 million was 0.3% below the level at the end of April of \$2,026.0 million and 4.1% below the level at the end of last May of \$2,104.7 million. In April-May changes in unfilled orders, the semi-durable consumers' group was higher at the end of May by 18.1% or \$9.2 million which increases were the highest in value and percentage terms. Both capital goods groups of the economic use classification were higher at the end of May than April, the increase for the combined groups being 0.9%. Industries manufacturing largely for export were 3.6% lower in May but were substantially above last May in value by over \$50 million and in percentage terms by 31.5%.

TRADING OUTLETS: Sales through manufacturers' trading outlets in May were estimated at a preliminary \$235.5 million up 9.5 percent from the revised April estimate of \$215.0 million and up 3.3 percent from the May 1960 estimate of \$228.0 million. Sales were up in each group ranging from 3.0 percent in iron and steel industries to 14.4 percent in "own" sales of electrical apparatus industries.

Inventories held at manufacturers' trading outlets in May were estimated at a preliminary \$289.3 million, up 2.9 percent from the revised April estimate of \$281.2 million and down 2.7 percent from \$297.2 last May. Changes among the groups were small in percentage terms, the largest being an 8.7 percent increase in petroleum and coal industries.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the December 1960 report, page 81.

C O N C E P T S

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 53 of the bulletin.

S O U R C E S

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 7. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 8. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

SHIPMENTS: Manufacturers' shipments in June at a preliminary \$2,053.5 million were up 1.2 percent from the revised May value of \$2,030.1 million but down 0.8 percent from \$2,070.6 million in June 1960. Shipments in the first half of 1961 of \$11,405.4 million were down 2.0 percent from \$11,641.2 million in the first half of 1960.

Shipments were higher in June for all but five of the industry groups of the Standard Industrial Classification. The five groups, showing a combined decline of \$27 million were knitting mills and clothing (6.7%), transportation equipment (2.7%), non-ferrous metal products (4.2%), petroleum products (4.8%), and chemical products (3.1%). Of the shipments increases, the largest in dollar terms was that of foods and beverages reflecting chiefly the seasonal activity of butter and cheese manufacturers. Iron and steel showed a \$9 million increase (3.6%) reflecting increased activity generally throughout the group. The other increases were much smaller in value terms. Among the groups of the economic use classification five showed declines in June from May. They were: semi-durable consumers goods, heavy transportation equipment, other capital goods, industries manufacturing largely for export, and motor vehicles and related industries. Of these declines, the first and last listed industry groups almost invariably decline in June. The decline in heavy transportation equipment is unusual for this month.

Shipments for the year to date have followed fairly well the pattern established in earlier months. Shipments in perishable consumers' goods have continued about two percent above 1960 while semi-durable consumers' goods have maintained a smaller edge over 1960 but durable consumers' goods have been about two percent below the 1960 rate. Shipments in the capital goods groups have been appreciably below the 1960 rates as have most of the miscellaneous groups.

INVENTORIES: The preliminary estimate of the value of inventories owned by manufacturers at the end of June of \$4,229.1 million was 0.6 percent below the revised May estimate of \$4,256.1 million and 1.1 percent below the June 1960 estimate of \$4,275.6 million. The preliminary estimate of the value of inventories held by manufacturers at the end of June of \$4,439.7 million was 0.5 percent below the revised May estimate of \$4,463.5 million and 2.9 percent below the June 1960 estimate of \$4,573.0 million. Inventories held under progress payments arrangements showed a slight increase in June but reports received too late for inclusion in the publication data indicate that this value will probably show a decline in the revised figures.

All components declined this month as follows: raw materials 0.9%, goods in process 0.2%, and finished products 0.3%.

The ratio of finished products to shipments was 0.71 in May and 0.70 in June and in June 1960. The ratio of total inventory owned to shipments was 2.10 in May, 2.06 in June and in June 1960.

Inventories have declined now for three consecutive months bringing the value of total inventories down \$110 million from March to June of which amount raw materials contributed \$68 million, goods in process \$20 million and finished products \$22 million. A concomitant decline of \$31 million in the value of progress payments would leave net goods in process inventory \$11 million higher in this period assuming that all the value of progress payments is included in goods in process. The present liquidation showed first in raw materials when the slight accumulation at the turn of the year gave way to a firm decline in March, continuing at approximately the same rate since. Goods in process inventory did not decline until May; finished products started to decline in April and have continued downwards. So far, the liquidation has centred in raw materials and the level in June is already the lowest since June 1956 but there are indications that the rate of liquidation of raw materials is easing. Furthermore, the liquidation of raw materials during the first half year is seasonal, usually ends in June and is replaced by modest accumulation until the year end. Finished products, on the other hand, usually show more pronounced liquidation in July and August than in any other period although the easing in the level this year started a little earlier than in most previous years. Goods in process inventory is much more difficult to generalize about but this component frequently eases downward in the mid-summer months.

The levels of inventory owned remains higher this June over last in only six groups of the Standard Industrial Classification. Of these six, three have definite seasonal characteristics and these groups are: foods and beverages, tobacco and tobacco products, and paper products. Accumulation in foods and beverages should be evident by August and should continue until November. Tobacco and tobacco products follow a very similar pattern though with less regularity. Paper products show even less regularity but some accumulation in the second half of the year usually occurs. Two groups of six show no consistent seasonality. They are transportation equipment and non-ferrous metal products showing an 11.2 percent and a 13.6 percent increase over last June's levels. Transportation equipment

has been moving up since the beginning of the year but the preliminary value for June shows a decline and if the group follows the movement of recent years it will hit the low for the year in July or August. Non ferrous metal products has been accumulating inventory almost without a break since the end of 1959. In the last two months the level has declined a little but it is difficult to say that the peak has been passed. The sixth and last of the groups showing higher inventory levels this June than last is miscellaneous manufacturing up 2.7 percent. This group is extremely difficult to follow.

Lacking a decisive movement in one of the major cyclical groups, it seems reasonable to expect seasonal patterns to pull down manufacturing inventories in July and August with a possibility of accumulation during the remainder of the year. The group most likely to upset these expectations iron and steel products, has been remarkably steady in the last several months. No sign of change is apparent in either new orders, unfilled orders, or shipments: the level of inventory owned in each of the industries constituting this group gives no indication of probable change.

ORDERS: The preliminary estimate of new orders received in June of \$2,032.6 million was 0.3 percent above the revised May value of \$2,026.5 million and 0.6 percent below \$2,044.1 million in June 1960. New orders received in the first half year of \$11,506.1 million were 0.8 percent below \$11,603.2 million received in the first half of 1960.

The level of unfilled orders at the end of June of \$2,001.5 million was 1.0 percent below \$2,022.4 million at the end of May and 3.7 percent below \$2,078.2 million at the end of June, 1960. The largest changes in value terms from May were an increase in semi-durable consumers' goods of \$3.1 million (6.2%), a decline in heavy transportation equipment of \$19.1 million (3.9%) and an increase of \$3.6 million (1.3%) in other capital goods. The largest percentage changes since last June were: perishable consumers' goods up 19.3, heavy transportation down 9.7, construction goods down 15.4, industries manufacturing largely for export up 23.3, and motor vehicles and related industries down 8.7.

TRADING OUTLETS: Sales through manufacturers' trading outlets in June of \$236.3 million were down slightly (0.3%) from \$236.9 million in May and down 1.2 percent from \$239.2 million last June.

Inventories held at trading outlets at the end of June of \$299.9 million were up 4.4 percent from \$287.2 million in May and down 1.4 percent from \$304.3 million last June.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the December 1960 report, page 81.

CONCEPTS AND SOURCES

For further detail, and for description of methods used, see December, 1960 report, page 81.

CONCEPTS

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 53 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.
(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.
(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.
(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.
(3) See footnote (2), table 2.
(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.
(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.
(3) This grouping does not include trucks and buses.
(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 7. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 8. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.
(2) See footnote (2), table 2.
(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

SHIPMENTS: Manufacturers' shipments in July, valued at a preliminary \$1,965.7 million, were 7.6 percent below the revised June value of \$2,128.2 million and 5.7 percent above the July 1960 value of \$1,859.5 million. Shipments in the January - July period at \$13,483.1 million were little changed from the corresponding 1960 total of \$13,500.8 million.

Only three groups of the Standard Industrial Classification showed increases in July and these were minor in value terms. The largest declines were in transportation equipment of \$52 million (28%), chemical products of \$27 million (19%), non-ferrous metal products of \$15 million (9%), paper products of \$15 million (8%), iron and steel products of \$14 million (5%), and foods and beverages of \$12 million (3%). All groups of the economic use classification declined in July except for semi-durable consumers' goods industries which recorded an increase. The largest percentage declines were in motor vehicles and related industries (30%), heavy transportation equipment (15%), and intermediate goods and supplies (12%).

Shipments invariably decline from June to July and the group changes this year are comparable to those of previous years.

INVENTORIES: The preliminary estimate of the value of inventories owned by manufacturers at the end of July of \$4,197.9 million was 0.7 per cent below the revised June estimate of \$4,228.9 million and 1.1 per cent below \$4,242.7 million in July, 1960. The preliminary estimate of inventory held by manufacturers at the end of July of \$4,391.6 million was 0.8 per cent below the revised June estimate of \$4,425.7 million and 3.2 per cent below \$4,534.5 million in July 1960. Inventories held under progress payments arrangements at \$193.7 million in July were 1.6 per cent below the June value of \$196.8 million and 33.6 per cent below the July 1960 value of \$291.7 million.

The changes in components for July were as follows: raw materials up 1.1 per cent, goods in process down 3.0 per cent, finished products down 1.7 per cent, and goods in process minus the value of progress payments down 3.3 per cent.

The ratio of total inventory owned to shipments was 2.14 in July, 1.99 in June and 2.28 in July, 1960. The ratio of finished products to shipments was 0.72 in July, 0.68 in June, and 0.76 in July, 1960.

Inventories owned by manufacturers declined from June to July in ten groups of the Standard Industrial Classification. The largest value declines were in transportation equipment industries of \$25 million, and in iron and steel products of \$8 million. Increases among the six groups were quite moderate and the largest in value terms were in foods and beverages of \$6 million, paper products of \$7 million, and chemical products of \$4 million.

Changes in inventory owned by manufacturers from July, 1960 to July, 1961 show nine groups of the SIC at lower levels this year than last. Iron and steel products show the greatest decline in both value and percentage terms of \$86 million or 11 per cent. Wood products have declined \$21 million or 7 per cent and electrical apparatus and supplies have declined \$19 million or 6.1 per cent. Increases in inventory during this period are as follows: foods and beverages \$23 million (4%), tobacco and tobacco products \$22 million (16%), paper products \$19 million (5%), transportation equipment \$12 million (5%), non-ferrous metal products \$30 million (16%), and miscellaneous manufacturing \$4 million (5%).

Inventories continued their decline into July which is the fourth month of continuous liquidation. Since the high in March, inventories held by manufacturers have declined \$158 million of which raw materials have contributed \$48 million, goods in process \$65 million, and finished products \$44 million. The present liquidation showed first in raw materials when the usual year-end build-up increase of this component gave way to a firm decline in March. The decline continued for three months before ending in an accumulation this month. Goods in process inventory did not decline until May; finished products started to decline in April and both components continued down this month.

So far in the present liquidation, the timing and direction of changes in the components conform quite closely to typical seasonal patterns and probably half of the decline can be attributed to purely seasonal forces. The non-seasonal aspect lies almost entirely in the extent of the liquidation. The decline in raw material and in progress payments have both been more severe than the experience of previous years would indicate. Goods in process inventory less the value of progress payments has also declined somewhat more extensively than usual. Finished products inventory on the other hand, while conforming generally to a seasonal pattern, has showed strong resistance to change and the level remains high. In June 1960 and June 1961 for example the percentage split of components was as follows (1960 in parenthesis): raw materials 43.4 (43.6), goods in process 23.9 (24.9), finished products 32.7 (31.6).

While the outlook for inventories during August is for further slight liquidation the evidence is somewhat clouded. Accentuated seasonal movements have been responsible, it appears, for the liquidation to date but the seasonal pattern in August is less pronounced than for other months. Preliminary data for shipments new orders and backlogs for iron and steel products clearly show signs of strengthening demand, which, if resulting in inventory accumulation in August may swamp the seasonal movements in other groups.

ORDERS: New orders received by manufacturers in July at a preliminary \$1,942.7 million were down 6.8 per cent from the revised June value of \$2,083.6 million and up 5.1 per cent from \$1,848.0 million in July 1960.

The balance of unfilled orders at the end of July of \$1,954.8 million was down 1.2 per cent from \$1,977.7 million in June and down 5.4 per cent from \$2,066.1 million in July 1960. Among the industry groups of the economic use classification the largest percentage decrease from June to July was in perishable consumers' goods industries of 10 per cent. The largest percentage increase, in the motor vehicles and related industries, was 7 per cent. Changes from July 1960 to July 1961 were greatest in the capital goods sector, in construction goods, and in industries producing largely for export. The capital goods sector and construction goods were both down about 10 per cent. The group of industries producing largely for export was 10 per cent above last July.

TRADING OUTLETS: Sales through manufacturers' trading outlets fell 4.5 percent from \$237.7 million in June to \$226.9 million in July. The largest percentage declines in sales were foods and beverages (11%), chemical industries (22%), and all other industries (10%). Increases were minor.

Inventories held at manufacturer's trading outlets increased at the end of July by 1.6 percent to \$304.9 million from \$300.0 million a month earlier. The largest percentage change was a decline of 8.1 percent in inventories of purchased goods of the electrical apparatus industries.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the December 1960 report, page 81.

C O N C E P T S

Shipments - (Tables 1 to 5)- represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 53 of the bulletin.

S O U R C E S

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 7. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 8. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

SHIPMENTS: Manufacturers' shipments in August of a preliminary \$2,037.8 million were up 4.0 percent from the revised July estimate of \$1,958.8 million and up 3.1 percent from the August 1960 estimate of \$1,976.2 million. Shipments in the January-August period of \$15,514.1 million were higher by 0.2 percent than \$15,477.0 million for the like 1960 period.

Shipments in August cling to no firm pattern with the last ten years showing five declines and five increases although the data adjusted for seasonal variation apparently interpret the increase this August as less than that expected from seasonal influences and actually show a decline. In very general terms, shipments reach a low point in the late summer and rise to a peak in the late fall: a lowpoint in July is usually correlated with a fall peak in September and a low point in August is usually correlated with a fall peak in October although this experience is by no means invariable and the past ten years are a narrow base for wide generalization.

The increase this August was shared by most groups of the Standard Industrial Classification. Three groups showed declines, the largest in both value and percentage terms was in the transportation equipment group of \$28 million or 22 percent. Reference to the two transportation groups of the economic use grouping will show that the motor vehicles and related industries was responsible for a decline of \$35 million (or 34%) while the heavy transportation group recorded an increase (of \$7 million) in shipments. It should be noted that the two groups of the economic use grouping are not identical to the one transportation group of the S.I.C. Three groups of the S.I.C. showing the largest value increases were knitting mills and clothing (\$30 million) paper products (\$19 million) and foods and beverages (\$14 million). Of these increases, that of knitting mills and clothing is a fairly typical seasonal movement and that of paper products is unusual in its size. The increase in foods and beverages is rather unusual for August and the increases that have been recorded in past years were much smaller than the current increase. Half the present increase of the foods and beverages group is in the beverage industries and may in part be accounted for by the higher than average August temperatures throughout Canada.

From the data available it appears that shipments are making a strong recovery in the second and third quarters after a rather weak period earlier in the year. Cumulative shipments were running for most of this year to date somewhat below the comparative totals for last year but a latterly rising trend has now brought this year's totals ahead of last. While the unadjusted shipments data shows the movement well enough the adjusted data clearly indicates the sharp upward movement as well as giving July and August extremely high values well above any previous peak. This resurgence has been reflected to some degree through most groups of the S.I.C. but with some expected - or nearly expected - exceptions. Foods and beverages has maintained a fairly consistent 3 percent margin over last year's values; tobacco and tobacco products, with some variation is holding to last year's values. Rubber products and wood products while showing some tendency to inch upward vis a vis 1960, are still at lower values than last years'.

INVENTORIES: The preliminary estimate of the value of inventories owned by manufacturers at the end of August of \$4,203.9 million was 0.3 percent above the revised July estimate of \$4,191.2 million and 1.1 percent below the August 1960 estimate of \$4,249.7 million. The preliminary estimate of the value of inventories held by manufacturers at the end of August of \$4,400.8 million was higher by 0.2 percent than the revised \$4,393.6 million at the end of July but lower by 3.1 percent than the August 1960 value of \$4,541.0 million. The preliminary value of inventory held under long-term contracts (progress payments) of \$196.9 million for August was 2.7 percent below the revised July value of \$202.4 million and 32.4 percent below the August 1960 value of \$291.4 million.

Changes in components for August were as follows: raw materials up 0.6 percent, goods in process up 2.0 percent, finished products down 1.8 percent, and goods in process less the value of progress payments up 3.1 percent.

The ratio of total inventory owned to shipments was 2.06 in August, 2.14 in July and 2.15 in August 1960. The ratio of finished products to shipments was 0.68 in August, 0.72 in July and 0.71 in August 1960.

The most noticeable feature of August inventories is the very large increase of \$26.5 million in the motor vehicles and related industries group of the economic use classification. This increase is several times the increase that usually occurs in this month and reflects the earlier-than-usual and intensive activity in the automobile industry. Production increased significantly in the middle of the month and affects the goods in process component chiefly.

In previous years the effect of annual model changes was usually masked because the shutdowns of some firms occurred while other firms were starting production on the new models. The result was a more modest increase in inventories spread through two or three months. This year, it appears that most firms shut down in July giving a very low inventory total for that month, and started manufacturing again in August causing the considerable increase for that month.

The increase in inventories in August may well mark the end of the liquidation of the last several months. The liquidation saw the levels of inventory held move down to the lowest since November 1956. The movement, while mostly seasonal in character was accentuated by the long-standing and extensive decline in inventory held but not owned (progress payments). The liquidation of this component has been almost continuous since the fall of 1958. From the high in March 1961 to the low last month, raw materials declined \$40.4 million or 2.0 percent, goods in process declined \$58.7 million or 5.4 percent and finished products declined \$57.2 million or 3.9 percent. The value of inventory held but not owned with a decline of \$39.1 million or 16.2 percent represents a large part of the decline in goods in process. In the same period inventory owned moved down \$117.2 million to a level similar to that obtaining at the end of 1959. Not only has the liquidation eased the level of inventories but it has also achieved a proportionally greater decline in finished products although this component remains a higher percentage of inventory owned than that obtained in previous years.

The outlook for inventories for September favours further accumulation although the marked increase of the motor vehicles and related industries in August indicate that the usual September increase of this group will not occur.

ORDERS: The preliminary value of new orders received by manufacturers in August of \$2,023.7 million was up 3.5 percent from the revised \$1,955.6 million in July and up 5.4 percent from \$1,920.4 million in August 1960.

The preliminary value of unfilled orders at the end of August of \$1,960.4 million was 0.7 percent lower than the revised \$1,974.5 million at the end of July and 2.5 percent below \$2,010.8 million at the end of August 1960.

Unfilled orders in the non-durable grouping of industries has been maintained at a higher level this year than last and at the end of this August was 14.8 percent above last August. Durable goods, however, hold the major portion of unfilled orders and the level here has recently fallen to the lowest yet recorded. The value at the end of this August at \$1,493.0 million was 6.9 percent below \$1,603.7 million last August.

TRADING OUTLETS: Sales through manufacturers' trading outlets in August were estimated at a preliminary \$243.3 million up 7.3 percent from the revised July value of \$226.6 million and down slightly from \$243.0 million in August 1960.

Inventories held at manufacturers' trading outlets at a preliminary \$303.6 million were down 1.7 percent from the revised \$308.8 million at the end of July and down 0.5 percent from \$305.2 million at the end of August 1960.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned as well.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the December 1960 report, page 81.

CONCEPTS AND SOURCES

For further detail, and for description of methods used, see December, 1960 report, page 81.

C O N C E P T S

Shipments - (Tables 1 to 5)- represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 53 of the bulletin.

S O U R C E S

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 7. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 8. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

SHIPMENTS: Manufacturers' shipments in September of \$2,090.9 million were 0.3 percent above August shipments of \$2,084.3 million and 1.4 percent above September 1960 shipments of \$2,061.5 million. Shipments for the nine months of 1961 of \$17,651.5 million were 0.6 percent above the like 1960 total of \$17,538.5 million.

Although the shipments increase this month appears quite nominal and although the shipments data adjusted for seasonal variation show a decrease these points should not obscure the fact that shipments this month are still at a very high level. While the increase is not unexpected, some of the changes of the industry groups need comment. The decline of \$13 million in the foods and beverage industries is somewhat unusual and reflects chiefly the declines of the beverages industries from the high shipments values recorded last month. A decline of \$10 million in iron and steel products is quite unusual for this group in September; more usually an increase is shown averaging \$16 million. A decrease of \$8 million in paper products reflects more the very high value last month than any weakness this month and, indeed the September value is high, barely below the September 1960 value. The pulp and paper industry was chiefly responsible for the decline in this group and was also chiefly responsible for the decline in the economic use group of industries producing largely for export. Countering these declines was a \$39 million increase in the transportation group of the S.I.C. which reflects the substantial increases in the motor vehicle and related industries. While this increase is very large it compares with \$25 million in 1960, \$13 million in 1959 and \$33 million in 1958.

Shipments to date have shown a strong recovery from the weak first quarter which was three percent below the first quarter of 1960. The rising trend of shipments in the second and third quarters which continued through the current month has brought 1961 shipment nearly one percent above the like 1960 total. Generalizing from the seasonal patterns of previous years a shipments peak would be expected this month with shipments falling progressively lower for the remainder of the year. At present it appears that the recent ebullience in shipments will continue through the remaining months of the year.

INVENTORIES: Inventories owned by manufacturers at the end of September of \$4,240.2 million were up 0.1 percent from \$4,236.5 million in August and up 0.4 percent from \$4,224.4 million in September 1960. Inventories held at the end of September of \$4,442.5 million were up 0.1 percent from \$4,437.6 million in August and down 1.2 percent from \$4,497.1 million in September 1960. Inventories held but not owned (progress payments) of 202.3 million at the end of September were 0.6 percent above \$201.1 million in August and 25.8 percent below \$272.7 million in September 1960.

Changes in the components from August to September were: raw materials down 0.5 percent, goods in process up 1.1 percent, finished products up 0.2 percent and goods in process less progress payments up 1.2 percent. Changes from September 1960 to September 1961 were mostly downwards: raw materials 0.5 percent, goods in process 3.6 percent, finished products 0.3 percent but goods in process less progress payments were up 3.6 percent.

The ratio of total inventory owned to shipments was 2.03 in September unchanged from August and 2.05 in September 1960. The ratio of finished products to shipments was 0.66 in September also unchanged from August and 0.67 in September 1960.

The recent liquidation of inventories seems conclusively ended. From the peak in March of \$4,308.4 million inventories owned moved downward \$117 million to a low of \$4,191 million in July. Accumulation started in August, a month earlier than was anticipated and hinged as it seemed then somewhat uncertainly on a large non-seasonal increase in the motor vehicles and related industries. Revised data for August show a substantial upward change from preliminary data in foods and beverages (\$14 million) and non ferrous metal products (\$17 million) as well as considerably smaller increases in other groups. Thus it appears the accumulation started more firmly in August than the preliminary data indicated.

The October issue of this publication will contain data which has been revised to incorporate the latest available benchmarks in accord with well established policy.

ORDERS: The level of unfilled orders at the end of September of \$1,946.4 million was down 1.3 percent from \$1,971.7 million at the end of August and down 1.1 percent from 1,967.8 million at the end of September 1960. New orders received in September of \$2,065.6 million was 0.8 percent below the \$2,081.5 million received in August and 2.3 percent above \$2,018.5 million received in September 1960. New orders received during 1961 to date of \$17,697.2 million are 1.8 percent ahead of the similar 1960 total of \$17,390.0 million. The increase this year in part reflects the increase in shipments but the backlog of unfilled orders while not showing positive signs of strengthening is showing greater stability in 1961 than during the run-off which occurred during 1960.

TRADING OUTLETS: Sales through manufacturers' trading outlets in September were estimated at a preliminary \$251.5 million up 2.5 percent from the revised \$245.2 million in August.

Inventories held at manufacturers' trading outlets at the end of September were estimated at a preliminary \$309.1 million up 1.6 percent from the revised \$304.4 million at the end of August.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the December 1960 report, page 81.

CONCEPTS AND SOURCES

For further detail, and for description of methods used, see December, 1960 report, page 81.

CONCEPTS

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated values shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 3) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 53 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 7. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 2.

TABLE 8. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

REVISIONS TO PREVIOUSLY PUBLISHED ESTIMATES

ANNUAL REVISIONS: - This issue of the monthly bulletin of Shipments, Inventories and Orders incorporates the final values for 1959 from the Census of Industry and is the basis for the revisions in each series in 1960 and 1961. This will be the last revision to the current values for this classification of the manufacturing industries although publication of the series on this basis will be continued into 1962. Final values for 1960 will be published on the new standard industrial classification during the summer of 1962 at the time when the entire monthly series is revised to the new system. The monthly series on the revised classification will be carried back to January 1957 in order to provide a five year continuous series on the new basis.

SHIPMENTS: - The annual revision of the shipments series incorporates the final 1959 census of industry values into the monthly shipments series for that year and is the basis for the revision of the 1960 and 1961 series. This revision of the 1960 monthly values constitutes the preliminary estimate of 1960 manufacturers' shipments which would have been published during the past summer as usual if it had not been for the projected general revision to the new standard industrial classification. With such an extensive revision planned for next year it has been necessary to combine the annual revision of the shipments series with the revision of the inventories and orders series which is usually published in the December bulletin. Publication of the revised series in October is therefore a compromise in time for each series.

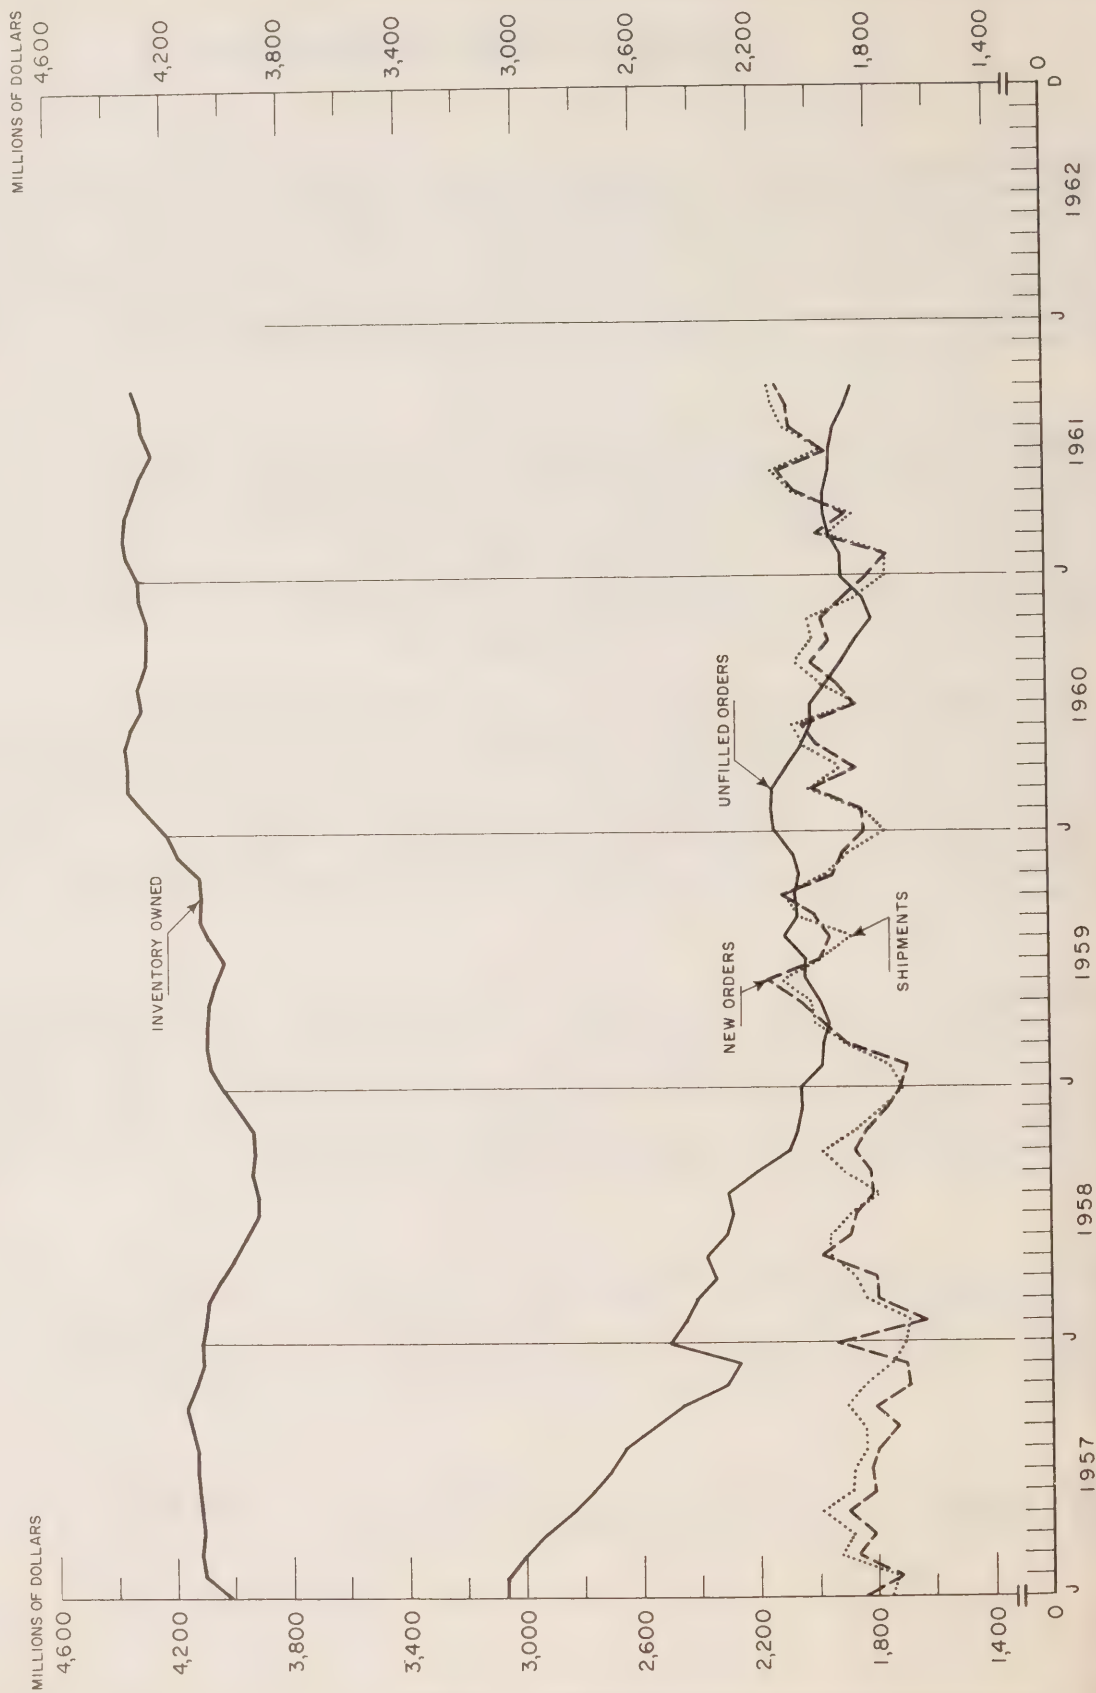

The annual revision in shipments for 1960 and 1961 also reflects all changes in the series due to adjustments in the reporting firms and the incorporation into the estimates of revised values and late values from the reporting firms. Since the current shipments estimate is based on a calculated ratio of the value of shipments by the sample firms to the total firms in each industry and since each month's values are calculated only twice between annual revisions (once for the preliminary or original estimate and again the month following for the revised current value) any revisions or reports which are received after this time can be included only at the annual revision. Similarly since the group of reporting firms must be kept constant during the year, revisions to the group to add new firms or to delete ones which have gone out of business can only be made at this time.

INVENTORIES: - Year end values from the 1959 Census of Industry have been incorporated in the monthly inventory series as benchmarks in the estimates. The error in the estimates for December 1959, derived from the December 1958 benchmark, has been assumed to be due to an accumulation during the previous eleven months; consequently the values for these months have been revised. The values for 1960 have been revised partly to reflect the change in the base from December 1958 to December 1959 and partly to reflect the change in trend resulting from adjustments in the sample. In addition to these two revisions the 1961 values have also been revised to include the values for reporting firms received too late for incorporation during the month of publication.

ORDERS: - Values for the orders series have also been revised to utilize the 1959 year-end values from the census of industry reports. The revision in the year-end values for 1959 entailed a revision in the 1959 monthly values since, as in inventories, the error is assumed to be accumulated during the previous eleven months. The 1960 and 1961 monthly values have also been revised to reflect the 1959 year end level and also on the basis of adjustments in the monthly sample and for late returns.

TRADING OUTLETS: - The revision in trading outlets is based solely on adjustments to the reporting group of firms for 1960 and 1961 and for 1961 for late returns.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

SHIPMENTS: Manufacturers' shipments in October of a preliminary \$2,136.0 million were 0.7 per cent above the September value of \$2,122.2 million and 7.0 per cent above the October 1960 value of \$1,996.4 million. Shipments for the ten months of 1961 of \$19,763.3 million were 1.5 per cent above the \$19,466.3 million for the ten months of 1960.

The largest value changes from September to October among the major groups of the Standard Industrial Classification were an increase of \$29 million in transportation equipment and a decrease of \$18 million in iron and steel products. Lesser value changes were in foods and beverages (+\$7 million), paper products (+\$6 million), non-ferrous metal products (-\$5 million) and electrical products (-\$4 million). The remaining changes were generally quite small in value terms. The preliminary October value, the highest value yet recorded for any month, represents also a slight departure from the seasonal pattern established in earlier years since a decline in October shipments might more readily be expected. It is, however, difficult to pin-point any one of the SIC group changes as unusual in either direction or extent. Instead the October shipments peak is noteworthy chiefly because most groups reflect the unusually high value.

Shipments in October are continuing the very strong recovery after the weak first quarter which was more than 3 per cent below the first quarter of 1960. Shipments for the second quarter were just slightly higher than shipments in the previous year since the recovery did not get under way until June: the five per cent increase in the third quarter brought shipments in the first nine months to nearly one per cent above shipments in the comparable period in 1960 and the seven per cent increase in October will raise the accumulated figures by nearly half of one per cent more.

Nearly all groups of the SIC shared in the recovery but it is easier to distinguish what appear to be basic trends among the industries if the economic use classification is used in the comparison. In this grouping for the ten months of 1961 against the ten months of 1960 the consumers' sector shows a 2.8 per cent lead with the greater percentage and value share contributed by perishable consumers goods. In the capital goods sector, other capital goods show a decline of 5.0 per cent; heavy transportation equipment shows a 3.2 per cent gain over 1960 but its concomitant group, motor vehicles and related industries, shows a 5.2 per cent decline over 1960. Construction goods and the unclassifiable group both show a 2.3 per cent margin over 1960. Intermediate goods and supplies show 4.4 per cent and industries producing largely for export show 0.2 per cent over their respective 10 month 1960 totals.

The above changes are interesting in themselves but they are additionally so because they reflect what appear to be underlying trends in the economy which may be summarized as some strength in the consumers' goods groups particularly in perishable goods, some weakness in the capital goods groups and construction goods group with continuing strength in the industries producing largely for export.

INVENTORIES: Inventories owned by manufacturers' at the end of October of \$4,315.4 million were 0.7 per cent above the September level of \$4,286.2 million and 1.1 per cent above the October 1960 level of \$4,269.8 million. Inventories held by manufacturers at the end of October of \$4,525.6 million were 0.9 per cent above the September level of \$4,495.2 million and 0.3 per cent above the October 1960 level of \$4,511.9 million. The value of inventory held but not owned (progress payments) at the end of October of \$210.2 million was 0.6 per cent above \$209.1 million at the end of September and 13.2 per cent below \$242.1 million at the end of October 1960.

All components showed increases from September to October as follows: raw materials 0.8 per cent, goods in process 0.9 per cent, finished products 0.4 per cent and goods in process less the value of progress payments 0.9 per cent. Changes from October 1960 to October 1961 were: raw materials up 0.5 per cent, goods in process up 1.7 per cent, finished products down 1.1 per cent and goods in process less progress payments up 6.0 per cent.

The ratio of total inventory owned to shipments was 2.02 in October unchanged from September as compared with 2.14 in October 1960. The ratio of finished products to shipments was 0.64 in October as compared with 0.65 in September and 0.70 in October 1960.

Changes among the industry groups of the SIC from September to October were generally small in percentage terms. The largest was a 4.9 per cent decline in rubber products. Lesser changes were a 4.3 per cent increase in chemical products and a 2.4 per cent increase in foods and beverages. The two latter changes stem from clearly-defined seasonal influences.

The revised data on total inventory owned reveal even more clearly than the earlier data the

strengthening influence of seasonal forces and the apparently diminishing influence of longer term forces. A longer term view may prove this interpretation inadequate but at the moment there is much to support it. For the years 1959, 1960 and 1961 to date the corresponding month-to-month changes throughout each year bear remarkable similarity. In 1959 and 1961, inventory owned moved upward from January through March then moved downward until the end of July and during this period the rates of change were also very similar. During the first half of 1960 the same general pattern can be seen with the difference that the accumulation at the beginning of the year continued past March to slightly higher values in April and May before moving down in June and July. Accumulation started again for 1959 and 1961 in August and continued through September although the October 1959 value was down slightly and the preliminary October 1961 value (which may change) showed a good increase. A three-month plateau (September-October-November) of reasonably stable values is noticeable in 1959 and 1960. In both years this was ended by accumulation in December.

The difference between the seasonal patterns evident in the last three years and the cyclical patterns evident in earlier years can be easily pointed out. During most of the years 1953, 1955, 1956 and 1957 inventories were accumulating although at widely varying rates. During most of the years 1952, 1954, 1958 inventories were liquidating. The turning points were not all of course at the year-end as implied but the longer swing both in building up and liquidating inventories was the predominant characteristic. During this year and in 1959 and 1960 it is quite clear that the earlier patterns of inventory behaviour have been changed.

ORDERS: Unfilled orders at the end of October of \$1,851.0 million were 1.3 per cent below the September value of \$1,875.0 million and 0.4 per cent above the \$1,844.2 million at the end of October 1960.

New orders received in October of \$2,112.0 million were 1.6 per cent above \$2,079.0 million received in September and 8.7 per cent above \$1,943.7 million received in October 1960.

TRADING OUTLETS: Sales through manufacturers' trading outlets in October estimated at \$252.3 million were 1.1 per cent below September sales of \$255.1 million and 3.7 per cent above October 1960 sales of \$243.2 million.

Inventories held at manufacturers' trading outlets at the end of October of \$308.0 million were 0.2 per cent below the September total of \$308.5 million and 0.8 per cent below the October 1960 total of \$310.4 million.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of inventory owned as well.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described on page 82.

CONCEPTS, METHODS AND LIMITATIONS

C O N C E P T S

PLANT SHIPMENTS, ORDERS, AND INVENTORIES (Tables 1, 2, 3, 4, 5 and 7):

Shipments - represent an estimated projection, on a monthly basis, of the latest available Gross Value of Factory Shipments from the annual Census of Industry. In the majority of cases, Census of Industry values include (a) sales from manufacturing plant of products made at the plant, (b) amounts received for repairs or custom work, (c) shipments of goods manufactured in the plant for further processing in another unit of the same company, and (d) shipments of finished products to manufacturers' sales branches for sale, for each establishment included. The value level used is defined as "factory selling value". Goods purchased for re-sale without further processing are not included. (1)

New Orders - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - are defined as estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled. (Since progress payments are treated for this survey as sales in the month received, total unfilled orders reported each month by firms operating on a progress payments basis are reduced by the total of progress accounts for these firms.) This definition of Unfilled Orders is therefore an expression in terms of future shipments values.

(1) There are a few exceptions to the definition of Census of Industry values given above:

- (i) In two industries, Sawmills, and Slaughtering and Meat Packing, custom work is valued at the estimated selling value of the product rather than by the amounts received for such work.
- (ii) In nine industries (Fish Processing, Veneer and Plywoods, Sawmills, Pulp and Paper, Non-Ferrous Metals, Smelting and Refining, Coke and Gas Products, Petroleum Products, and Miscellaneous Products of Petroleum and Coal) the Census of Industry values represent production of finished goods rather than shipments. For these industries the Census of Industry values are adjusted by change in finished products inventory before projection for the monthly series.
- (iii) In four industries, Fabricated and Structural Steel, Aircraft, Railroad Rolling Stock and Shipbuilding, the Census of Industry value is for "work done during the year", i.e. production of finished goods plus change in goods-in-process inventory during the year, rather than shipments. For these industries, the Census of Industry values are also adjusted by change in finished products inventory before projection for the monthly series.

There are three industries apart from those listed under (ii) and (iii) above, for which adjustments to Census of Industry values are made before projection for the monthly series. In the Flour Milling, Brewing and Fruit and Vegetable Preparations industries, all of which are characterized by large seasonal variations, many large firms operate on fiscal year periods (which are used in Census of Industry compilations) differing from the calendar year. In unusual years the projection of Census of Industry values for these industries, as if they represent calendar year values, could cause considerable distortion in the estimates. To avoid this, the Census of Industry values from 1954 on have been adjusted to estimated calendar year values before projection. This adjustment is based on values reported to the monthly survey.

Firms operating on long-term contracts represent a special problem for the monthly series. The value levels projected are those of the Census of Industry as described in the first paragraph (except for the four industries described under (iii) above). However, for the monthly series, all progress receipts on long-term contracts are included as sales in the month received, instead of the total sale being included in the month the sale is finalized. It is felt that this treatment gives a better indication of monthly activity but it does allow possible distortion of value levels in that, for the Census of Industry value which is being projected, any final sale will be recorded in one specific year, while the monthly series may have spread this sale over more than one calendar year. Since the bulk of the value of long-term contract work falls in the four industries noted (in (iii) above), for which adjustments for work done are made in compiling the Census of Industry value, this inconsistency does not affect the all-industry or group totals to any great extent.

Total Inventory Owned - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of:

- (a) raw materials;
- (b) goods in process;
- (c) finished goods of own manufacture at plant and warehouse;
- less (d) value of inventory held but not owned. This item cannot be assigned to specific components.

Since the series relates to manufacturing inventory only, the value of inventory of goods purchased for re-sale without further processing is not included.

Inventory Held but Not Owned - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory - some firms treat progress receipts as sales and reduce book value of inventory as payments are received; in some of these cases they no longer have records of actual holdings above the book value level. Wherever estimates are available, these have been included, but the estimated value of inventory under this heading must be considered, to some extent, incomplete.

Total Inventory Held - represents the estimated total book value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from total inventory owned because of the inclusion of inventory held under progress payments arrangements. It includes items (a) to (c) as shown above under total inventory owned.

Inventory Components: Raw Materials, Goods in Process, and Finished Products, are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to make definitions of components appropriate to each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Table 3, are defined according to the Standard Industrial Classification Manual.

The Economic Use groups of industries (Table 4) were designed to facilitate the analysis of trends by a grouping based on the use made of each industry's products i.e. on the main demand factors affecting each industry. In drawing up this classification the groupings were designed to tie in with National Accounts concepts as closely as possible; as a result the three main groupings - Consumer Goods industries, Capital Goods industries, and Construction Goods industries - contain only industries producing mainly final products in each of these categories. Only industries in which substantially more than half the production is of items clearly belonging to one or other of these three specific categories or industries in which half the production falls into one such category and the remainder is scattered over two or more other categories, were assigned to one of the main groupings. All other industries were assigned to a miscellaneous category which was sub-divided into four further groupings of related industries: Industries Producing largely for Export, Intermediate Goods and Supplies, Motor Vehicles and Related Industries, and a final unclassifiable group. The latter groupings cut across the Economic Use criteria to some extent. For further detail on the considerations leading to the assignment of industries for these groupings reference should be made to the December, 1955 report.

TRADING OUTLETS SALES AND INVENTORIES (Table 8): See page 75.

Trading Outlets are defined as any establishments operated by manufacturers, apart from their plants (or plant warehouses), which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock or which carry small quantities for demonstration purposes are not included. Sales arranged by outlets carrying stock but shipped direct from plant are excluded wherever possible. Inventories of trading outlets include any holdings at warehouses which serve the outlets. Other warehouses, unless they have sales staffs, are excluded.

The Trading Outlets series has two purposes:

- (a) To clarify the manufacturing shipments and inventory series by excluding distribution activity (the extraneous activity which is most commonly included in reports by manufacturers) so that the manufacturing series is confined, as far as possible, to plant activities only at plant value levels;
- (b) To provide as complete and consistent a series as possible on manufacturers' distributional activity, so that this can be combined with the manufacturing series, if desired, for analytical purposes; or combined with data for independent wholesalers to provide a more complete picture of current wholesale activity than has previously been available.

Trading Outlets may or may not be separately incorporated wholesale companies. The majority of them are not separately incorporated. Any separately incorporated wholesale company owned by a manufacturing company or by a group of manufacturing companies is, however, included if the bulk of its sales are of goods manufactured by the owning or associated companies. Since it is obvious from the reports received that almost all unincorporated outlets handle mainly the products of the owning manufacturing company the Trading Outlets series may be taken to represent the activities of establishments the main function of which is to distribute the products of the manufacturing companies which own them.

This series was first published a year ago in the December 1958 bulletin. It is still to some extent in the experimental stage in the sense that the universes which are being projected monthly are not necessarily final, and the levels of the published data are, therefore, subject to revision over the next few years. In addition, only part of the total material collected for the series is considered adequate for publication at this time. It has, however, rectified to a large extent two areas of inconsistency in previous reports, one practical and the other conceptual.

The practical inconsistency was that many companies selling entirely or partially through their own sales organizations find it simpler to report total company sales monthly than to report "shipments leaving plant", which may be either final sales or shipments to their own selling outlets. Such reports were previously accepted in a large number of cases but were used to project the latest available Census of Industry values, which are generally defined as shipments from plant at plant selling value. For many of these companies it has now been possible to arrange for a monthly report covering an estimated value of plant shipments at plant selling value, in addition to the company sales figure. The former is now used for compilation of shipments values for Tables 1 to 5. To the extent that trends in the plant shipments series were being distorted by use of company sales values rather than plant shipments values this change represents an improvement. (It should, however, be noted that the change has not yet been possible in all relevant cases.)

The conceptual inconsistency was that, while shipments represented plant level shipments, the finished products inventories values previously represented total finished products owned by manufacturers, whether held at plant, warehouse or trading outlets, rather than plant finished products only. The two separate series, one for plant, and the other for trading outlets, now each cover sales and inventories for comparable activities.

(It should not, however, be assumed that the plant finished products series and the Trading Outlets inventory series are, when summed, the exact equivalent of the previous manufacturers' finished products series. As a matter of fact, they are reasonably close to being equivalent, but the former finished products series included some retail store operations of manufacturers (retail operations are excluded from the Trading Outlets series) and the Trading Outlet series includes a number of separately incorporated wholesale companies which were not previously included.)

The problems which have been raised by a separate series covering sales and inventories of Trading Outlets are due basically to difficulties of response. The major problems are:

- (a) In the cases remaining where it is still impossible to obtain plant level shipments values on a monthly basis it is often also impossible to obtain plant level finished products inventory holdings separately from Trading Outlets holdings. The inventory breakdown is, in these cases, available only at year-ends. There is, therefore, an element of uncertainty in the monthly finished products trends for the two series when used separately which did not exist when the two elements were combined. For one industry group, Tobacco Products, it was impossible to obtain separate Trading Outlets data, so total finished products inventory values for this group were left in the manufacturing series.

- (b) In a number of cases, Trading Outlet sales and inventory values, while easily available separately from plant values, are not available broken down as between "goods of own manufacture" and "goods purchased for re-sale". This is more often the case with separately incorporated wholesale companies than with other outlets. In most industry groups enough reports are available which distinguish between own and purchased goods to make a separation of values under this heading feasible. For one industry group, Petroleum Products, the separation is, however, not possible, so total sales and inventories have been included under the heading of "goods of own manufacture" for this group.
- (c) In a number of cases where the separation, by the appropriate reporting firms, of plant level shipments and Trading Outlets sales is not yet available it has been possible to estimate Trading Outlets sales of goods of own manufacture on the basis of the total sales figures for the companies concerned and the probable proportion of total sales which are being made through outlets. It did not, however, appear possible to estimate sales of purchased goods in these cases, because of the wide range of ratios of own to purchased goods in the sales values reported by the remaining companies. It is hoped that some improvement can be made in this area in the coming year. In the meantime, with the exception of the Electrical Apparatus and Supplies group where practically no estimating problem occurs, it is felt that the estimates of sales of goods purchased for re-sale do not yet warrant publication. This problem is not so acute for inventory values of goods purchased for re-sale, since year-end values at least are generally available for own and purchased goods separately, but it is felt that publication of this item should be postponed until comparable sales values are available.

Many of the companies operating trading outlets are multiple-unit firms with operations crossing two or more individual industries. No attempt has been made to obtain detail at this level for the Trading Outlets series. This means that the industry-group (e.g. Foods industries, Iron and Steel Industries) is the smallest unit for which data can be shown separately. There are a few cases where outlet operations cut across two industry-groups, and in these cases the values have been assigned to the group in which the bulk of the manufacturers' production falls.

Because of the relatively small number of companies included and because, on the whole, this type of operation tends to be large it can be expected that, when a company gives up its distributing organization or when new organizations are set up, the effect on the series will be to cause considerably larger sudden changes than are common in the plant shipments and inventory series.

METHODS

a) Current Estimates -

For eight series (plant shipments, raw materials, goods in process, plant finished products, inventory held but not owned, unfilled orders, trading outlets sales, and trading outlets inventories), current value estimates for each industry covered are made by applying the monthly percentage changes shown by the unweighted group of reporting firms in each industry to the latest available benchmark values for the same industries. Industries not covered are carried at the latest available benchmark levels.

(The above is subject to a few exceptions. In one industry, reporting firms are treated as a stratum sample, rather than as an unweighted group. In three industries, available physical data on stocks and shipments are valued using price indexes. In three industries, shipments estimates are based on employment data and price indexes.)

Total inventory held in each industry is the sum of the estimated values for raw materials, goods in process, and finished products. Total inventory owned in each industry is calculated by deducting the estimated value for inventory held but not owned from estimated total inventory held. Value of new orders in each industry is derived from estimated shipments and unfilled orders using the formula "Unfilled Orders at end of previous month plus Net New Orders during month less Shipments during month equals Unfilled Orders at end of Current month".

() Benchmark Revisions -

As new benchmarks become available, estimates for the year to which the benchmarks apply are revised as follows:

- For the plant shipments series, the Census of Industry value for the year for each industry is spread by months according to the trend shown by reporting firms in the original estimate for that year.

- For the trading outlets sales series, the estimated value for the year, obtained from the Annual Trading Outlets survey, for each industry is spread by months according to the trend shown by reporting firms in the original estimate for that year.

- For the five basic inventory series (raw materials, goods in process, plant finished products, inventory held but not owned and trading outlets inventory) and the unfilled orders series, where the benchmark values apply to the Year-End rather than to the entire year as in the shipments series, the error in the original estimate for the year-end for each industry is assumed to have accumulated equally over all twelve months of the year (i.e., one-twelfth of the amount of the error is added to the original estimate for January; two-twelfths is added to the original estimate for February; three-twelfths to March and so on).

- The three derived series (total inventory held, total inventory owned, and new orders) are re-calculated on the basis of the revised data for the other six series.

LIMITATIONS TO THE USES OF THE DATA IN THIS REPORT

- (1) Data for individual industries should not be interpreted as commodity data, since very few industries produce only one commodity or only one class of commodities.
- (2) Since the series are in terms of current values, changes over time may be the result of both price and volume changes. Some indication of the extent to which changes in value are due to price changes, thus isolating the physical change which has taken place, can be obtained by reference to the wholesale price index. This procedure is, however, inadequate for anything more than a general indication of trends. The main problem is that the wholesale price index is a commodity price index, while the shipments, orders, and inventory series are industry series with the possibility of changes in commodity content over time. These changes in commodity content could seriously affect the weighting pattern to be applied to price indexes considered applicable for any specific industry. In considering inventory values turnover rates and valuation methods are other important variables which should be taken into consideration but for which adequate data are seldom available.
- (3) Shipments data do not necessarily represent market sales for the manufacturing universe.
(a) Apart from the few exceptions as noted under (b) below they are defined (see page 82) to include total movement of goods out of manufacturing plants (or, in some cases, divisions of plants); shipments of goods for further processing by other plants of multiple-unit companies are, therefore, included as well as shipments for sale. (b) In a few special cases, the Census of Industry values include goods in-process change, and for these cases progress receipts on long-term contracts are included as shipments as they occur, rather than at the time sales are finalized. (c) Many manufacturers re-sell purchased goods, in addition to sales of their own products and these re-sale items are not included.
- (4) The component breakdown for inventories is on an establishment, not a commodity, basis. Since each manufacturer reports inventories as on his own books, both for the monthly and annual surveys, and since a number of industries contain plants at various stages of processing, the finished products for one plant might represent commodities which would be considered raw materials or goods in process for another plant in the same industry. The composition of each industry must be studied before attempting to use the component breakdown as applicable to the industry as such, rather than to the firms in the industry.
- (5) For Unfilled Orders, the following reservations apply:
 - (a) The series, by definition, excludes plants producing entirely for stock. Since approximately 40% of manufacturing is done by such plants the trends shown are not necessarily applicable to manufacturing in general.
 - (b) Since the series is defined as "unshipped" orders, rather than "unproduced" orders, there is always the probability that some of the Unfilled Orders are accounted for in inventory holdings. The reduction of unfilled orders by progress receipts eliminates to a considerable extent the effect of large goods-in-process holdings in connection with long-term contracts, but the amount of the remaining inventory, either goods-in-process or finished products, which is held in connection with existing unfilled orders would be difficult to evaluate.
 - (c) The series includes total orders, not just those considered as "binding", so estimates of future shipments trends based on these may be overstated due to the possibility of cancellations.
 - (d) Unfilled Orders for all industries include to some extent a duplication due to the fact that orders for final products in one industry may result in orders to firms at secondary or primary stages of processing. Since the total gross value of shipments will contain the same duplication, this does not invalidate the series for purposes of analysis. However, the total impact of any one order on future shipments levels will not necessarily be shown in the Unfilled Orders series since at any stage an order may be filled from stock rather than added to existing backlogs.

- (6) The Economic-Use grouping of industries (Table 4). The difficulties involved in classifying both commodities, and industries on the basis of commodities made, are sufficient to limit the usefulness of this compilation to indications of trends only. The main difficulty is that many commodities may be used for different purposes which cut across classification lines. Depending on the use made of it, the same product may be a "final" product or a component part; or a final product may be used for consumption, capital equipment, or in construction. A second difficulty is that the basic data for this survey are in terms of estimates for individual industries not for commodity data. An industry is a group of establishments primarily concerned with the production of a specified product or class of products. Many establishments produce other commodities in addition to those with which they are primarily concerned and, as a result, very few industries can be considered "pure" in the sense that they produce only the product or class of products implied in their title. Therefore, many industries which might fall quite clearly into specified groups on the basis of the chief use of their main products are much less clear-cut when the additional commodities produced in the establishments concerned are considered.

In this classification only those industries in which substantially more than half the production is of items clearly belonging to a specified grouping or in which half the production is of such items and the remainder is scattered over two or more groups were assigned to the main categories; all industries which could not be so assigned were placed in the "Unclassifiable" category. This means that the inclusion of extraneous commodities is kept to a minimum. It does not, unfortunately, do anything about the fact that each category does not necessarily include all important relevant items. The grouping that is most seriously affected by the forced exclusion of relevant items is the Durable Goods sub-group of the Consumer Goods category. It does not contain the consumer portion of the Automobile industry and, in addition, it does not include the stove portion of Heating and Cooking Apparatus, since the latter industry had to be assigned to the Unclassifiable group. On the other hand, it does include two large industries with important production of items which should not be assigned to Consumer Durables - these are the Furniture industry, which produces office and store furniture as well as household furniture; and the Radios and Parts industry which also produces electronic equipment. The sub-category "Other Capital Goods Industries" contains the highest proportion of industries in which only about half of total production actually should be assigned to the specific grouping but where the remainder of production is dispersed over a number of other groupings. It is, however, felt that this dispersion is not so likely to result in distortion as is possible with the large specific items involved in the Consumers' Durable Goods group.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 7. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 8. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

SHIPMENTS: Manufacturers' shipments in November of \$2,154.9 million were 0.8 per cent above the October value of \$2,137.6 million and 7.0 percent above the November 1960 value of \$2,013.7 million. Shipments for the eleven months of 1961 of \$21,919.8 million were 2.0 percent above the corresponding 1960 total of \$21,480.0 million.

The largest increases from October to November among the manufacturer's groups of the Standard Industrial Classification were in transportation equipment of \$24 million, and iron and steel of \$7 million. The largest declines were in knitting mills and clothing of \$7 million, and foods and beverages of \$5 million. In the same period, all groups of the consumers sector of the economic use classification showed declines. All remaining groups of this classification excepting intermediate goods and supplies showed increases.

Shipments in November are continuing the very strong recovery after the weak first quarter which was more than three per cent below the first quarter 1960. Shipments for the second quarter of 1961 were just slightly higher than shipments for the second quarter of 1960 since the recovery did not get under way until June. The five per cent increase in the third quarter brought shipments in the first nine months in 1961 to nearly one per cent above shipments in the comparable 1960 period. The increases in October and November will raise the accumulated figures by one per cent more.

These comparisons should not obscure the fact that three groups in the S.I.C. did show a margin at the end of the first quarter of 1961 over the first quarter 1960. Foods and beverages has maintained a fairly consistent 3 per cent lead over 1960; leather products had a 6 per cent lead in the first quarter over 1960 and increased this to 12 per cent in November; miscellaneous manufacturing increased a 4 per cent lead to 7 per cent from the first quarter to November. Most of the remaining groups have moved from varying percentages below their respective 1960 totals to show eleven month cumulative totals that are up to two per cent higher than 1960. In fact, only two groups failed to show an improvement in total shipments for 1961 to date compared with 1960. Tobacco and tobacco products are fractionally below the 1960 total but transportation equipment is 2 per cent or \$35 million below the 1960 total and reflects the low production and shipments of motor vehicles in 1961 up to the end of November.

November shipments are the highest yet recorded for any month and this fact is additionally remarkable since November shipments, usually among the middle values of the year, frequently show a decline from October. In the nine years since 1953 only in three did November shipments show any gain over October and two of these, this year and last, they have been nominal (\$17 million each): the declines have often been considerably greater.

This change in the monthly pattern of shipments is the first significant departure from the usual seasonal movements since the recovery began. For the ten months of 1961 ending in October the 1.5 per cent lead obtaining over the ten months of 1960 was shared by most manufacturing groups without any widespread or significant shift from the usual seasonal movements. In November, however, construction goods, industries producing largely for export, and unclassifiable industries have all shown increases where decreases have prevailed almost exclusively for the past nine years. On the other hand, the three consumers' goods groups usually show a decline in November and do so this November. The seasonal changes in the remaining groups have been less consistent over the years.

Adding to the shift in the seasonal pattern has been the rather unusual movement in the motor vehicles and related industries. This group has moved decisively upward since the usual seasonal low in August and the unusual strength from this group has contributed significantly to the high total shipments values of the last few months. Despite this recent strength the eleven-month shipments total for 1961 was 3.5 per cent or \$53 million below the 1960 total for a similar period. Production of motor vehicles in terms of the total number of vehicles produced reflects the same differences.

Similar strength in the industries producing largely for export in the last few months has brought down a substantial accumulation of finished products inventory. Although part of this run off is undoubtedly seasonal, part may also be in response to the continuing high level of unfilled orders which has not yet shown the year-end decline which frequently occurs.

INVENTORIES: Inventories owned by manufacturers at the end of November estimated at \$4,372.3 million were up 0.5 per cent from \$4,350.3 million at the end of October and up 2.4 per cent from \$4,268.8 million at the end of November 1960. Inventories held by manufacturers at the end of November estimated at \$4,573.8 million were up 0.6 per cent from \$4,548.0 million in October and up 1.5 per

cent from \$4,508.4 million in November 1960. The value of inventory held but not owned (progress payments) at \$201.6 million in November rose 2.0 per cent from \$197.7 million in October and declined 15.9 per cent from \$239.6 million in November 1960.

Inventory components all showed increases from October to November as follows: raw materials 0.8 per cent, goods in process 0.2 per cent, and finished products 0.5 per cent. All components showed increases this November over last and were, in percentages: 1.2, 2.4, and 1.1 respectively. Goods in process less the value of progress payments showed a 0.2 per cent decline from October to November and a 7.5 per cent increase from November 1960 to November 1961.

The ratio of total inventory owned to shipments was 2.03 in November, 2.04 in October and 2.12 in October 1960. The ratio of finished products to shipments was 0.64 in November, 0.65 in October and 0.68 in November 1960.

Increases in inventory owned among the manufacturing groups of the Standard Industrial Classification were largest in value terms from October to November in foods and beverages (\$16 million), iron and steel products (\$10 million) and chemical products (\$6 million). The largest declines were in wood products (\$9 million) and paper products (\$4 million).

The build-up inventory from August followed the seasonal liquidation from April to July. While some seasonal accumulation could be expected toward the year-end the increase to date exceeds reasonable expectations and may indicate the increasing importance of cyclical or other influences in contrast to the seasonal ones. The latter months of 1961 seem removed from the strongly seasonal pattern which marked the earlier months, and which identified it with the years 1960 and 1959 in which the seasonal pattern was clearly evident.

This point of view can be made clearer by referring to the movement of the manufacturing groups of the SIC. The usual and expected increases occurred in foods and beverages and chemical products in October and November. Several other groups recorded declines which were also more or less anticipated as fairly regular seasonal movements. Strong upward movements during October and November in iron and steel, transportation equipment, and non ferrous metals have boosted the seasonal accumulation by \$45 million. By contrast these three groups were reduced by \$12 million in the same period in 1960. Iron and steel products displays a fairly clear cyclical pattern and the movements, whether of accumulation or liquidation, usually are significant in the movement of total owned manufacturers' inventory. Transportation equipment also displays a distinctly cyclical movement but has also certain seasonal characteristics which may be of sufficient strength to affect total data for one or several months. Non-ferrous metals has been in nearly continuous accumulation since December 1959 and has somewhat blurred the clearer picture of seasonal and cyclical inventory movements.

ORDERS: New orders received by manufacturers in November of \$2,136.8 million were 1.4 per cent above the October value of \$2,106.5 million and 8.9 per cent above the November 1960 value of \$1,961.9 million. The largest percentage increases from October to November were in semi-durable consumers' goods (10.3) and motor vehicles and related industries (6.3).

Unfilled orders at the end of November of \$1,825.8 million were 1.0 per cent below the October total of \$1,843.9 million and 1.9 per cent above the November 1960 total of \$1,792.4 million.

TRADING OUTLETS: Sales through manufacturers' trading outlets in November of \$250.5 million were down 1.9 per cent from \$255.3 million in October and up 3.0 per cent from \$243.3 million in November 1960.

Inventories held at outlets of \$313.5 million at the end of November were 3.0 per cent above the October value of \$304.3 million and 0.9 per cent below the November 1960 value of \$316.4 million.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of Inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned as well.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the October 1961 report, page 82.

C O N C E P T S

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 53 of the bulletin.

S O U R C E S

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 6. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 7. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

SHIPMENTS: Manufacturers' shipments in December valued at \$2,018.5 million were down 6.1 percent from \$2,149.3 million in November and up 9.3 percent from \$1,846.8 million in December 1960. Shipments for 1961 valued at \$23,932.7 million were up 2.6 percent from \$23,326.7 million in 1960.

Shipments invariably decline in December and the decline this month was also, as usual, common to nearly all manufacturing groups. The heavy transportation group of the Economic Use classification was the only group in this classification to show an increase over November and, although this occurs fairly consistently in December, this year it was less than usual. The shipments concept is distorted by progress payments in some of the industries classified to the heavy transportation group. The increase in shipments most Decembers, in part, represents end-of-year write-offs to sales rather than a physical shipment of goods and is also reflected in the declines in inventory owned and unfilled orders. The largest value declines from November to December in the Economic Use groups were: semi-durable consumer's goods \$30.0 million, construction goods \$24.6 million, and intermediate goods and supplies \$22.9 million.

Only two groups of the Standard Industrial Classification showed increases in December—tobacco and tobacco products of \$5.8 million and petroleum products of \$2.3 million. Iron and steel products had the largest value decline (\$24.9 million): other declines were knitting mills and clothing (\$21.0 million), paper products (\$16.5 million), foods and beverages (\$16.5 million) and chemical products (\$13.7 million).

Although the shipments increase in 1961 over the previous year is only a relatively modest 2.6 percent the fact that shipments were higher is in itself something of an achievement since all of the margin in 1961 was achieved in the last seven months. Although the increase in this period was fairly evenly distributed over the groups of the S.I.C. in terms of the percentage margin over 1960 shipments, the durable goods group made the larger advance during the year. The first quarter of 1961 saw durable goods 9.3 percent or 228.2 million below the first quarter of 1960 while the annual total saw this group 1.1 percent or \$108.4 million above 1960. Non-durable goods first quarter total was 1.4 percent or \$43.4 million above the 1960 first quarter and the annual total was 3.7 percent or \$497.4 million above 1960.

A longer-term comparison of annual shipments totals of the two groups, durable and non-durable, show non durable shipments advancing each year since 1957 over the previous year with 1961 shipments 13.0 percent (or \$1.6 billion) above 1957. The increase in each year was between three and five percent except in 1960 when shipments were only slightly higher (less than one percent) than shipments in 1959. Durable goods show erratic changes since 1957 with 1961 shipments only 1.5 percent (or \$0.15 billion) above 1957. The manufacturing groups most affecting the durable goods group are transportation equipment which in 1961 was 13.2 percent (or \$299.1 million) below 1957 shipments and iron and steel products which was only 2.0 percent or \$57.2 million above 1957. Together these two groups constituted 52.5 percent of durable goods shipments in 1957 and 49.3 percent in 1961.

INVENTORIES: Inventories owned by manufacturers at the end of December valued at \$4,392.6 million were 0.4 percent above the November value of \$4,376.3 million and 2.3 percent above the December 1960 value of \$4,294.2 million. Inventories held by manufacturers at the end of December valued at \$4,593.9 million were 0.3 percent above the November value of \$4,577.9 million and 1.4 percent above the December 1960 value of \$4,532.7 million. Inventories held under progress payments arrangements of \$201.3 million at the end of December were 0.2 percent below the November value of \$201.6 million and 15.6 percent below the December 1960 value of \$238.5 million.

Raw materials declined fractionally in December but goods in process increased 0.4 percent and finished products increased 0.9 percent. All components showed increases from last December to this and were: raw materials 1.0 percent, goods in process 3.3 percent, and finished products 0.3 percent.

The ratio of total inventory owned to shipments was 2.18 in December, 2.04 in November and 2.33 in December 1960. The ratio of finished products to shipments was 0.69 in December 0.64 in November and 0.75 in December 1960.

The December increase in manufacturers' owned inventories was shared by all except three groups of the Standard Industrial Classification and all except four groups of the Economic Use classification. The foods and beverages group of the S.I.C. showed a \$17.3 million decrease and the declines in the industries of this group were almost entirely responsible for a \$14.5 million decline in the perishable consumers group of the E.U. classification.

The petroleum products group of the S.I.C. showed a decline of \$3.1 million or 1.3 percent. The above-noted changes conform generally to usual seasonal influences. The one noticeable departure from usual was a small decline (1.0 million or 0.3 percent) in paper products. This group frequently shows an increase in December possibly from the accumulation in the pulp and paper industry of logs at mill as raw material inventory. (A similar movement is noticeable in wood products.) This December, the decline reflects chiefly the liquidation of finished products and an unusual dip in raw materials. The decline noted above in perishable consumers' goods of the Economic Use classification was responsible for the lower level from November to December in the consumers' sector. Lower values in both heavy transportation and other capital goods brought a lower level to the capital goods sector while construction goods and all groups of the miscellaneous sector showed increases.

The present rebuilding of inventories which started in the third quarter of 1961 has continued and although the preliminary (seasonally adjusted) value for December of owned inventory is down from November it is still at the very high level reached in the closing months. The December 1961 value of \$4,410.2 million was 1.8 percent above the cyclical peak of \$4,332.0 million reached in July 1960 and 4.9 percent above the earlier cyclical peak of \$4,202.3 million in October 1957.

While the level already reached is above previous highs the total inventories owned - shipments ratio (using seasonally adjusted figures for both series) is showing very low values. The considerable strength of shipments after the first quarter of 1961 drove the ratio down sharply despite rising inventory levels. A brief rise to higher values in September, October and November gave way to the very low figure in December. The movement of the ratio of finished products to shipments (using seasonally adjusted figures for both series) follows the total inventory-shipments ratio very closely and is also showing a similar downward trend in 1961.

ORDERS: The preliminary estimate of the level of unfilled orders on the books of manufacturers' at the end of December was \$1,913.1 million up 0.2 percent from the November value of \$1,909.5 million and up 4.8 percent from \$1,825.9 million at the end of December 1960.

November figures, revised to include late or delinquent returns, have changed considerably from the preliminary figures. The revised November value shows an increase of \$65.6 million, or 3.6 percent, from October reflecting the \$58.9 million dollar increase in unfilled orders in the heavy transportation equipment group of the Economic Use Classification as well as scattered increases in other groups. From November to December unfilled orders in the heavy transportation group were reduced by \$5.4 million to \$395.1 million which is, however, considerably (\$24.5 million) below the December 1960 value of \$419.6 million.

Several groups of the Economic Use Classification however, did show considerable increases in unfilled orders this December as compared with last. The groups and percentages are: perishable consumers' goods 9.4, other capital goods, 14.3, industries producing largely for export 25.2, motor vehicles and related industries 14.2 and intermediate goods and supplies 13.9. The level of unfilled orders in no group is more than six percent below the December 1960 level.

The rise in unfilled orders in November and December has brought the level 4.8 percent higher at the end of this December than last. The increase in December can be identified as largely seasonal in character but November more usually shows a decline rather than the increase shown this year.

New orders, reflecting the decline in December shipments, were down 8.7 percent from \$2,214.9 million in November to \$2,022.1 million in December. The December value is 7.5 percent above the December 1960 value of \$1,880.3 million and reflects the strength of the shipments value which remains high despite the decline from November.

TRADING OUTLETS: Sales through manufacturers' trading outlets in December of \$258.3 million were 1.3 percent above the November value of \$255.1 million and 2.3 percent above the December 1960 value of \$252.5 million. Sales for 1961 of \$2,864.3 million were 1.5 percent above the 1960 total of \$2,822.8 million.

Inventories held by manufacturers at trading outlets at the end of December of \$304.5 million were 3.4 percent below the November value of \$315.1 million and 1.7 percent above the December 1960 value of \$299.3 million.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of Inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned as well.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the October 1961 report, page 82.

CONCEPTS AND SOURCES

For further detail, and for description of methods used, see October 1961 report, page 82.

CONCEPTS

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 53 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 6. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 7. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.
